Supporting information

Synthesis

4-(Chloromethyl)phenyl acetate. This compound was prepared according to a literature procedure [Taylor L. D., Grasshoff J. M., Pluhar M. *J. Org. Chem.* 1978, **43**, 1197]. ¹H NMR (400 MHz, CDCl₃), δ 2.31 (s, 3H, CH₃COOPh-), 4.57 (s, 2H, -PhCH₂Cl), 7.10 (d, *J* = 8.8 Hz, 2H, Ph-H), 7.40 (d, *J* = 8.8 Hz, 2H, Ph-H).

4-(ethyl-phenol)-4'-methyl-2,2'-bipyridine. To a solution of 4,4'-dimethyl-2,2'-bipyridine (2.5 g, 13.5 mmol) in THF (50 mL) was added a solution of freshly prepared LDA (2 mL of diisopropylamine, 8.1 mL of 1.6 M n-butyllithium in 10 mL of THF maintained at 0 °C) in drop wise under N₂ at 0 °C, the resulting dark brown solution was stirred for 1h, 4-(Chloromethyl)phenyl acetate (20 mmol, 3.69 g) was added quickly, then the ice bath was removed and the solution was allowed to warm to room temperature. After 3 h, the reaction was quenched by the addition of 100 mL of phosphate buffer (pH = 7.0). The solution was extracted with 3 × 50 mL of CH₂Cl₂, the combined CH₂Cl₂ layers were dried (Na₂SO₄) and evaporated to a yellow residual oil. The crude product was purified by column chromatography on silica gel, eluting first with CH₂Cl₂, followed by 10% acetone/CH₂Cl₂, yielded 3.1 g of the desired compound (82.5%). ¹H NMR (CDCl₃, ppm) δ 2.37 (s, 3H, CH₃), 2.75-2.84 (m, 4H, CH₂), 6.73-6.75 (d, *J* = 8.4 Hz, 2H,

Ph-H), 6.89-6.92 (d, $J = 8.4$ Hz, 2H, Ph-H), 7.03-7.05 (dd, $J = 4.8$ Hz, 1.2 Hz, 1H, bpy-H), 7.12-7.13 (dd, $J = 4.8$ Hz, 1H, bpy-H), 8.18 (s, 2H, bpy-H), 8.49-8.53 (m, 2H, bpy-H).

[Ru(bpy)₂(4-(4-ethyl-phenol)-4'-methyl-2,2'-bipyridine)](Cl)₂ (1). Compounds 4-(4-ethyl-phenol)-4'-methyl-2,2'-bipyridine (87 mg, 0.3 mmol) and *cis*-Ru(bpy)₂Cl₂·2H₂O (141 mg, 0.27 mmol) were added to the solution of 40 ml of 50% ethanol/water (v/v). The reaction flask was wrapped with aluminum foil and refluxed under N₂ atmosphere for 4 h, an orange brown solution was obtained. After removing the solvent by rotary evaporation, the crude product was purified by column chromatography on silica gel (eluent CH₃CN/H₂O/saturated aqueous KNO₃, 10/2/1, v/v/v). Excess KNO₃ and the solvent were removed; the residue was re-dissolved in water and precipitated with a saturated solution of NH₄PF₆. The precipitate was filtered and dried in vacuum to afford the compound as PF₆⁻ salt. ¹H NMR (400 MHz, CD₃CN), δ 2.51 (s, 3H, CH₃), 2.87 (t, $J = 6.8$ Hz, 2H, CH₂), 3.03 (t, 2H, $J = 6.8$ Hz, CH₂), 6.66-6.68 (d, $J = 8.4$ Hz, 2H, Ph-H), 6.83-6.85 (d, $J = 8.4$ Hz, 2H, Ph-H), 7.07-7.09 (m, 1H, bpy'-H), 7.20-7.22 (m, 1H, bpy'-H), 7.35-7.39 (m, 2H, bpy-H), 7.42-7.46 (m, 2H, bpy-H), 7.48-7.52 (m, 2H, bpy'-H), 7.66-7.76 (m, 4H, bpy-H), 8.00-8.09 (m, 4H, bpy-H), 8.29 (s, 1H, bpy'-H), 8.37 (s, 1H, bpy'-H), 8.56-8.60 (m, 4H, bpy-H). ESI-MS (m/z (%)): 849.0 (30) [M -PF₆⁻]⁺, 352.0 (100) [M -2PF₆⁻]²⁺; HRMS (ESI, m/z): [M -PF₆⁻]⁺ calcd for C₃₉H₃₄F₆N₆OPRu, 848.7616; found, 848.7651, [M -2PF₆⁻]²⁺ calcd for C₃₉H₃₄N₆ORu, 351.8984, found, 351.8995. Because CB[8] is completely insoluble in organic solvents, so the PF₆⁻ salt was metathesized to the chloride salt for aqueous solution by using tetra-*n*-butylammonium chloride (Bu₄NCl) dissolved in a minimal amount (< 10 ml) of acetone.

S1. Cyclic voltammograms of the Ru(bpy)₃ complex (left, solid line), phenol-bipyridine ligand (left, dashed line) and DPV of the Ru Complex **1** (right) in CH₃CN. Electrolyte: 0.1 M N(n-C₄H₉)₄PF₆; Scan rate: $\nu = 100 \text{ mV s}^{-1}$.

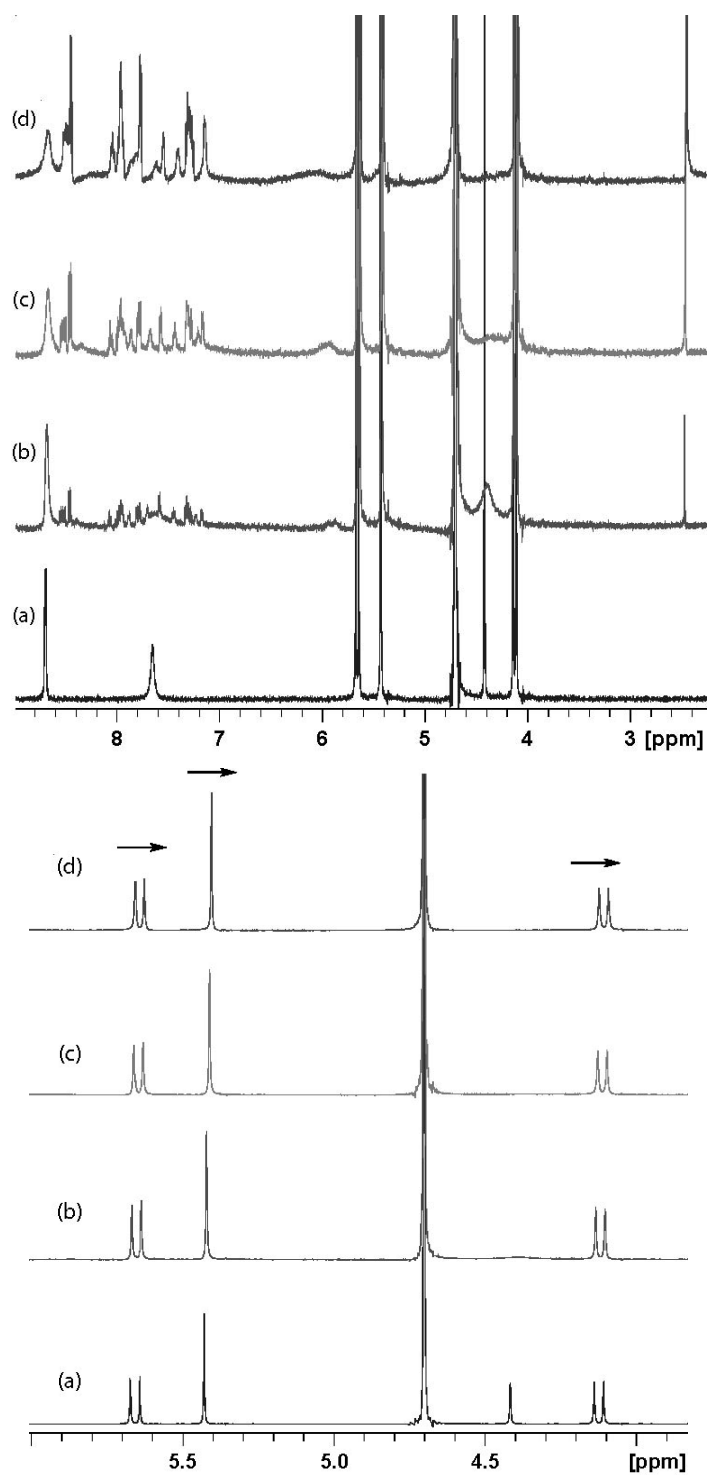

S2. ¹H NMR spectra (500 MHz, D₂O) of complex **1** only (a), addition of 1 equiv of MV²⁺ (b), addition of 1 equiv of CB[8] (c).

S3. Part of the MS spectrum for the 1:1:1 inclusion complex (bottom) and simulation (top).

S4. The dependence of the absorbance of **1** (5 μM) in aqueous solution at 460 nm on the increasing equiv of 1:1 $\text{MV}^{2+}/\text{CB}[8]$

S5. ^1H NMR spectra to show (top) the dynamic inclusion of complex **1** into the $\text{MV}^{2+}/\text{CB}[8]$ complex as 0:1.0:1.0 (a), 0.5:1.0:1.0 (b), 1.0:1.0:1.0 (c) and 2.0:1.0:1.0 (d); and (down) the focus on the shift of the CB[8] peaks showing the dynamic interaction.

S6. Absorption spectra of complex **1** (10 μM), CB[8] (10 μM), MV^{2+} (10 μM) and 100 μM TEOA, before (black), after 20 min (blue), after 40 min (red), and after 60 min (pink) light irradiation, respectively.

S7. Normalized absorption spectra of $\text{Ru}(\text{bpy})_3^{2+}$ (10 μM), CB[8] (10 μM), MV^{2+} (10 μM) and 100 μM TEOA after light irradiation.

S8. Composition of the three systems a), b), and c) with addition of 10 equiv TEOA and irradiated for 15 min for ^1H NMR measurements.

S9. ^1H NMR of the three systems a), b), and c) after addition of 10 equiv TEOA and irradiated for 15 min.
