**TABLES AND FIGURES SECTION (supporting information)**

![Graphs of MS/MS spectra](image)

**Fig. S1** Four MS/MS spectra of representative agrochemicals examined in this study. (a) MS/MS spectrum $[M+H]^+$ ($m/z$ 228) of ametryn. (b) MS/MS spectrum $[M+H]^+$ ($m/z$ 216) of atrazine. (c) MS/MS spectrum $[M+H]^+$ ($m/z$ 230) of terbuthylazine. (d) MS/MS spectrum $[M+H]^+$ ($m/z$ 292) of parathion-ethyl.
Fig. S2  Detection of selected herbicides spiked into environmental water samples by LTP-MS/MS. (a) Detection of atrazine (spiking level: 1 µg L⁻¹) in an aqueous solution (MS/MS: m/z 216 → 174); (b) Detection of terbutylazine (spiking level: 10 µg L⁻¹) in aqueous solution (MS/MS: m/z 230 → 174). The LTP-MS experiments were performed using 3 µL of the water sample (without any sample preparation) spotted onto the glass substrate heated at 150 °C, with examination by tandem mass spectrometry.
