Application of Surface Enhanced Raman Scattering to the Solution Based Detection of a Popular Legal High, 5,6-methylenedioxy-2-aminoindane (MDAI)

Samuel Mabbott\textsuperscript{1,2}, Omar Alharbi\textsuperscript{1}, Kate Groves\textsuperscript{1} and Royston Goodacre\textsuperscript{1}

\textsuperscript{1}Manchester Institute of Biotechnology, School of Chemistry, The University of Manchester, Manchester, M1 7DN

\textsuperscript{2}Centre for Molecular Nanometrology, Department of Pure and Applied Chemistry, University of Strathclyde, 295 Cathedral Street, Glasgow, G1 1XL

Supplementary Information

\textbf{Figure S1} Raman spectrum of Pure MDAI powder taken using the DeltaNu Advantage benchtop Raman spectrometer (633 nm, 3 mW laser power)
Figure S2 Mean SERS spectra of MDAI at concentrations ranging from 500 ppm down to 8 ppm (also including blank, with no MDAI present).
