The file contains:

Scheme 1. Geometries of the most stable B_6 and B_6^{2-} clusters

Scheme 2. Shape of the delocalized π and σ MOs of B_6.

Scheme 3. Optimized geometries of the lowest-lying structures of B_8, B_8^{2-} and B_9⁻.

Scheme 4. Optimized structures of the anions B_{10}^{2-} and B_{11}⁻.

Scheme 5. The optimized structure of B_{12} and B_{13}⁺.

Scheme 6. Optimized structure of the elongated dianions B_{14}^{2-} and B_{16}^{2-}.

Scheme 7. Optimized structures of B_6H_5⁺ and Li_7B_5H_5⁺

**Figure S1.** The possible transitions of B₃⁺ cluster.

**Figure S2.** The total, π and σ ring current maps of B₇⁻, B₈⁰²⁻ and B₉⁻ clusters. The ring current density was calculated using B3LYP/6-311G* method.

**Figure S3.** Schematic orbital-energy level for the symmetry allowed virtual excitations in the B7-boron cluster. Rotationally (translationally) allowed excitation is shown as hollow (solid) arrow.

**Figure S4.** Schematic orbital-energy level for the symmetry allowed virtual excitations in the B10²⁻ boron cluster. Rotationally (translationally) allowed excitation is shown as hollow (solid) arrow.

**Figure S5.** The MOs have main contributon to π and σ ring current of B₁₂.

**Figure S6.** Schematic orbital-energy level for the symmetry allowed virtual excitations in the B16²⁻ boron cluster. Rotationally (translationally) allowed excitation is shown as hollow (solid) arrow.

**Figure S7.** The ring current maps of MOs which has main contribution to π and σ ring current density of B₁₉⁻ and B₁₈²⁻.

**Figure S8.** The ring current maps of MOs which has main contribution to π and σ ring current density of a) Li₇B₅H₅⁺ and b) B@B₅H₅⁺

**Figure S9.** The ring current maps of M@B₆H₆q with M=Co, Fe and Mn; q=+1,0, -1.

**Figure S10.** The current density of MOs of Fe@B₆H₆

**Figure S11.** The ring current maps of σ MOs (a) π-MOs (b) for Fe@B₇H₇

**Figure S12.** The ring current maps of BₙCₘ cluster which isoelectronic with B₁₀²⁻.
Scheme 1. Geometries of the most stable $B_6$ and $B_6^{2-}$ clusters

Scheme 2. Shape of the delocalized $\pi$ and $\sigma$ MOs of $B_6$. 

**Scheme 3.** Optimized geometries of the lowest-lying structures of B$_8$, B$_8^{2-}$ and B$_9^{-}$.

**Scheme 4.** Optimized structures of the anions B$_{10}^{2-}$ and B$_{11}^{-}$.
Scheme 5. The optimized structure of $B_{12}$ and $B_{13}^+$. 

Scheme 6. Optimized structure of the elongated dianions $B_{14}^{2-}$ and $B_{16}^{2-}$. 

Scheme 7. Optimized structures of $B_6H_5^+$ and $Li_7B_5H_5^+$.
Figure S1. The possible transitions of $B_3^+$ cluster.
Figure S2. The total, π and σ ring current maps of B₇⁻, B₈⁻² and B₉⁻ clusters. The ring current density was calculated using B3LYP/6-311G* method.
Figure S3. Schematic orbital-energy level for the symmetry allowed virtual excitations in the B\textsubscript{7}-boron cluster. Rotationally (translationally) allowed excitation is shown as hollow (solid) arrow.
Figure S4. Schematic orbital-energy level for the symmetry allowed virtual excitations in the B$_{10}^6$ boron cluster. Rotationally (translationally) allowed excitation is shown as hollow (solid) arrow.
Figure S5. The MOs have main contribution to π and σ ring current of B_{12}. 
Figure S6. Schematic orbital-energy level for the symmetry allowed virtual excitations in the $B_{16}^+$ boron cluster. Rotationally (translationally) allowed excitation is shown as hollow (solid) arrow.
Figure S7. The ring current maps of MOs which has main contribution to π and σ ring current density of B_{19} and B_{18}^{2-}.
Figure S8. The ring current maps of MOs which has main contribution to π and σ ring current density of a) Li₇B₅H₅⁺ and b) B₂B₅H₅⁺
Figure S9. The ring current maps of M@B6H6q with M=Co, Fe and Mn; q=+1,0, -1.
Figure S10. The current density of MOs of Fe@B₆H₆
Figure S11. The ring current maps of $\sigma$ MOs (a) $\pi$-MOs (b) for Fe@B$_7$H$_7$

(a) $\sigma$-electrons, $\pi$-electrons, $\sigma$-electrons
Figure S12. The ring current maps of $B_nC_m$ cluster which isolectronic with $B_{10}^{2-}$.
