1. General procedure for preparation of carbonized loofah (CL)

Firstly, loaded Loofah into a tube furnace and heated at a heating rate of 10 °C min⁻¹ up to 600 °C for 3 hours under an Ar atmosphere to furnish carbonized loofah (CL).

2. Repeating Experiments

After the photocatalysis of Suzuki reaction was performed, the catalyst was filtered, washed with water and acetone, dried and reused for the next cycle. Each cycle followed the general procedure mentioned above.

⁸ The catalysts were prepared according to literature: carrier (200 mg) in water (20 mL) mixed with acetone solution (5 mL) of Pd(OAc)₂ (70 mg) and stirred at 90 °C for 1 h. ⁹ Pd content in catalysts were determined via inductively coupled plasma (ICP).
