Figure SI.1 QE-TPDA profiles of cyclohexane, recorded at 10°C/min.
Figure S1.2 QE-TPDA profiles of \( n \)-nonane, recorded at 10°C/min (A and B) or at 2°C/min (C and D).
Figure S1.3 Pore size distributions, based on the QE-TPDA profiles of n-nonane (Figs 4c and 4d), calculated from the desorption (a and b) or the adsorption parts (c and d).
