Physical measurements:

Powder X-ray diffraction (XRD) data were obtained using a Rigaku D/MAX-rA diffractometer with Cu-Kα radiation (\(\lambda = 1.5418 \, \text{Å}\)). IR spectra (KBr pellets) were recorded on a Nicolet Impact 410 FTIR spectrometer. The thermogravimetric analyses were performed on a Netzsch STA 449c analyzer in a flow of N\(_2\) with a heating rate of 10 °C/min. Magnetic measurements were performed in the temperature range 2-300 K with a SQUID MPMS-7 magnetometer manufactured by Quantum Design. Background corrections for the sample holder assembly and diamagnetic components of the compound were applied. Single crystal X-ray diffraction data were collected on a New Gemini, Dual, Cu at zero, EosS2 diffractometer at room temperature. The crystal structures were solved by direct methods. The structures were refined on \(F^2\) by full-matrix least-squares methods using the \textit{SHELXTL} program package.\(^1\)

Synthesis

\textbf{Synthesis of (H\textsubscript{2}dab)\textsubscript{0.5}Co(H\textsubscript{2}PO\textsubscript{4})(ox) (1):} A mixture of CoO (0.150 g), \(\text{H}_3\text{PO}_4\) (85 wt\%, 136 µL), \(\text{H}_2\text{C}_2\text{O}_4\cdot2\text{H}_2\text{O}\) (0.252 g), and 1,4-diaminobutane (100 µL) in a molar ratio of 2:2:2:1 was sealed in a Teflon-lined stainless steel autoclave and heated at 170 °C for 7 days. The autoclave was subsequently allowed to cool to room temperature. Reddish violet block-like crystals were recovered by filtration, washed with distilled water and ethanol, and finally dried at ambient temperature (70.2% yield based on cobalt).
Synthesis of \((\text{H}_2\text{dab})_{0.5} \cdot \text{Zn(H}_2\text{PO}_4)(\text{ox})\) (2): A mixture of \(\text{ZnO} (0.162 \text{ g})\), \(\text{H}_3\text{PO}_4 (85 \text{ wt\%}, 136 \mu\text{L})\), \(\text{H}_2\text{C}_2\text{O}_4 \cdot 2\text{H}_2\text{O} (0.252 \text{ g})\), and 1,4-diaminobutane (100 \(\mu\text{L}\)) in a molar ratio of 2:2:2:1 was sealed in a Teflon-lined stainless steel autoclave and heated at 150 °C for 7 days. The autoclave was subsequently allowed to cool to room temperature. Colorless block-like crystals were recovered by filtration, washed with distilled water and ethanol, and finally dried at ambient temperature (32.6% yield based on zinc).

Synthesis of \((\text{H}_2\text{dab})_{0.5} \cdot \text{Mn(HPO}_4)(\text{ox})_{0.5}(\text{H}_2\text{O})\) (3): A mixture of \(\text{MnO} (0.142 \text{ g})\), \(\text{H}_3\text{PO}_4 (85 \text{ wt\%}, 136 \mu\text{L})\), \(\text{H}_2\text{C}_2\text{O}_4 \cdot 2\text{H}_2\text{O} (0.126 \text{ g})\), and 1,4-diaminobutane (100 \(\mu\text{L}\)) in a molar ratio of 2:2:1:1 was sealed in a Teflon-lined stainless steel autoclave and heated at 150 °C for 8 d. The autoclave was subsequently allowed to cool to room temperature. Light-pink block crystals were recovered by filtration, washed with distilled water, and finally dried at ambient temperature (61.4 % yield based on manganese).

Synthesis of \((\text{H}_2\text{dab})_{0.5} \cdot \text{Cd(HPO}_4)(\text{ox})_{0.5}(\text{H}_2\text{O})\) (4): A mixture of \(\text{CdO} (0.256 \text{ g})\), \(\text{H}_3\text{PO}_4 (85 \text{ wt\%}, 136 \mu\text{L})\), \(\text{H}_2\text{C}_2\text{O}_4 \cdot 2\text{H}_2\text{O} (0.126 \text{ g})\), and 1,4-diaminobutane (100 \(\mu\text{L}\)) in a molar ratio of 2:2:1:1 was sealed in a Teflon-lined stainless steel autoclave and heated at 150 °C for 7 d. The autoclave was subsequently allowed to cool to room temperature. Colorless block crystals were recovered by filtration, washed with distilled water, and finally dried at ambient temperature (46.8 % yield based on cadmium).

Synthesis of \((\text{H}_2\text{dab})_2 \cdot \text{Ga}_4(\text{HPO}_4)_8(\text{H}_2\text{PO}_4)_2(\text{ox})_2(\text{H}_2\text{O})_2\) (5): A mixture of \(\text{Ga}_2\text{O}_3 (0.187 \text{ g})\), \(\text{H}_3\text{PO}_4 (85 \text{ wt\%}, 240 \mu\text{L})\), \(\text{H}_2\text{C}_2\text{O}_4 \cdot 2\text{H}_2\text{O} (0.252 \text{ g})\), and 1,4-diaminobutane (100 \(\mu\text{L}\)) in a molar ratio of 1:3.5:1:1 was sealed in a Teflon-lined stainless steel autoclave and heated at 150 °C for 7 d. The autoclave was subsequently allowed to cool to room temperature. Colorless prism-like crystals were recovered by filtration, washed with distilled water, and finally dried at ambient temperature (23.6 % yield based on...
gallium).

**Synthesis of (H$_2$dab)$_{0.5}$·In(HPO$_4$)(H$_2$PO$_4$)(ox)$_{0.5}$ (6):** A mixture of In$_2$O$_3$ (0.138 g), H$_3$PO$_4$ (85 wt%, 136 µL), H$_2$C$_2$O$_4$·2H$_2$O (0.126 g), and 1,4-diaminobutane (50 µL) in a molar ratio of 1:4:2:1 was sealed in a Teflon-lined stainless steel autoclave and heated at 150 ºC for 7 d. The autoclave was subsequently allowed to cool to room temperature. Colorless block crystals were recovered by filtration, washed with distilled water, and finally dried at ambient temperature (95.0 % yield based on indium).
