Figure S1. PCA scores plot based on the data from UPLC–MS profiling data in (A) positive and (B) negative ion mode (n = 3). Legend: black, controls; blue, 50μM/L corticosterone group; red, 200μM/L corticosterone group.
**Figure S2.** Variation of total twenty-eight variables among control group and corticosterone-treated groups with different concentration in PC12 cells (n = 3).
