Supplementary information

Figure S1 (a) Schematic illustration of TMSb and TMIn precursor molar fractions used to grow InSb nanowires where TMSb was kept constant (1.08 x 10⁻⁴) and TMIn with molar fraction of 4.88 x 10⁻⁶ was pulsed. SEM images of a set of InAs-InSb nanowires where the InSb segment is grown with the conditions shown in (a). For (b) on time was set to 10 s and off time to 60 s with 30 cycles (c). For (c) on time was set to 5 and off time to 60 s with 30 cycles.
