Contents:

**Fig. SI-1** \(^1\)H NMR (top), \(^{13}\)C (bottom) spectra of PB\(_{90}\)Glux\(_{10}\)S copolyester with indication of peak assignments.

**Fig. SI-2** \(^1\)H NMR (top), \(^{13}\)C (bottom) spectra of PGluxS homopolyester with indication of peak assignments.

**Fig. SI-3** Derivative curves of PBS, PB\(_{90}\)Glux\(_{10}\)S and PB\(_{50}\)Glux\(_{50}\)S.

**Fig. SI-4** Heating DSC traces of samples quenched from the melt for \(T_g\) observation.

**Fig. SI-5** DSC traces for PB\(_{95}\)Glux\(_{5}\)S: (a) Heating at 10 \(\degree\)C\(\cdot\)min\(^{-1}\), (b) Cooling at 10 \(\degree\)C\(\cdot\)min\(^{-1}\), (c) Second heating at 10 \(\degree\)C\(\cdot\)min\(^{-1}\), (d) Heating at 20 \(\degree\)C\(\cdot\)min\(^{-1}\) of a sample quenched from the melt.

**Fig. SI-6** Degradation curves representing the decay in molecular weight against incubation time for PGluxS and PManxS at pH 7.4. (+) and (-) stand for presence and absence of lipases.

**Fig. SI-7** Compared weight-average molecular weight of PBS copolyesters made from Glux-diol and Manx-diol. PBS data in orange.

**Fig. SI-8** Degradation curves representing the decay in molecular weight against incubation time for isocompositional PBS copolyesters containing Glux and Manx units at pH 7.4. (+) and (-) stand for presence and absence of lipases.
Fig. SI-1 $^1$H NMR (top) and $^{13}$C (bottom) spectra of PB$_{90}$Glux$_{10}$S copolyester with indication of peak assignments.
Fig. SI-2 ¹H NMR (top) and ¹³C (bottom) spectra of PGIuxS homopolyester with indication of peak assignments.
Fig. SI-3 Derivative curves of PBS, PB_{90}Glux_{10}S and PB_{50}Glux_{50}S.

Fig. SI-4 Heating DSC traces of samples quenched from the melt for $T_g$ observation.
**Fig. SI-5** DSC traces for PB$_{95}$GluXS: (a) Heating at 10 °C·min$^{-1}$, (b) Cooling at 10 °C·min$^{-1}$, (c) Second heating at 10 °C·min$^{-1}$, (d) Heating at 20 °C·min$^{-1}$ of a sample quenched from the melt.

**Fig. SI-6** Degradation curves representing the decay in molecular weight against incubation time for PGluxS and PManxS at pH 7.4. (+) and (-) stand for presence and absence of lipases.
**Fig. SI-7** Compared weight-average molecular weight of PBS copolyesters made from Glux-diol and Manx-diol. PBS data in orange.

**Fig. SI-8** Degradation curves representing the decay in molecular weight against incubation time for isocompositional PBS copolyesters containing Glux and Manx units at pH 7.4. (+) and (-) stand for presence and absence of lipases.
