Figure S1. Cytotoxicity of K$_2$PtCl$_6$ (10$^{-3}$ M) on HepG2 human hepatocellular carcinoma, MCF-7 breast cancer and THP-1 human acute monocytic leukemia cells. 5 µl of sample was used for 2x10$^4$ cancer cells.
Figure S2. Cytotoxicity of Oleic acid (undiluted) on inhibition of HepG2 human hepatocellular carcinoma, MCF-7 breast cancer and THP-1 human acute monocytic leukemia cells.
Figure S3. Cytotoxicity of Curcumin (dissolved in Oleic acid) on inhibition of HepG2 human hepatocellular carcinoma, MCF-7 breast cancer and THP-1 human acute monocytic leukemia cells. 5 µl of sample was used for 2x10^4 cancer cells.
Figure S4. Cytotoxicity of Curcumin (dissolved in D/W) on inhibition of HepG2 human hepatocellular carcinoma, MCF-7 breast cancer and THP-1 human acute monocytic leukemia cells. 5 µl of sample was used for 2x10^4 cancer cells.
Figure S5. Cytotoxicity of Ionic Liquid [BMIM][BF$_4$] (diluted in D/W) on inhibition of HepG2 human hepatocellular carcinoma, MCF-7 breast cancer and THP-1 human acute monocytic leukemia cells. 5 µl of sample was used for 2x10$^4$ cancer cells.

F. N: Every experimental point value is in triplicate.

Incubation time: HepG2 cell: 4 days, MCF-7 cell: 7 days, THP-1 cell: 5 days
