Contents

Figure S1 CV for the electropolymerization in the 0.1 mol/L KCl solution containing 1.0×10^{-4} mol/L quercetin and 1.0×10^{-2} mol/L pyrrole at the scanning rate of 100 mV/s for 1-15 cycles under a potential from -0.2 V to 1.0 V to get the polymers.------------------------------------------ 2

Figure S2 (a) Effect of pH for detect quercetin on MIPs/β-CD/AuNPs/GR/GCE; (b) Effect of pyrrole concentration on MIPs/β-CD/AuNPs/GR/GCE; (c) Optimization of scan rate and (d) scan cycles.--------------------------------------------------------------------------------------------------------------- 3

Figure S3 Stability of the imprinted sensor shown with the ratio of the current response of 3, 7, or 15 days to that of 0 day.-------------------------------------------------------------------------------- 4
