Tailoring Mechanical Properties through Coronal Layer Overlap in Tethered Micelle Hydrogel Networks

Chen Guo\textsuperscript{a} and Travis S. Bailey\textsuperscript{a,b}

Supporting Information

Figure S1. DSC of polystyrene homopolymer (S-OH) with molecular weight of 8390 g mol\textsuperscript{-1}. 
Figure S2. Expanded version of Figure 6 in the main text. Complete dynamic frequency sweeps comparing both $G'$ and $G''$ for hydrogels based on combinations of SO-1 with (a) SOS-1, (b) SOS-1.6, and (c) SOS-2.3 at 30 °C. "x' denotes the mol% SOS-Y triblock copolymer in the network.
Figure S3. Expanded version of Figure 7 in the main text. Complete dynamic frequency sweeps comparing both $G'$ and $G''$ for hydrogels based on combinations of SO-1 with (a) SOS-1, (b) SOS-1.6, and (c) SOS-2.3 at 10, 30, and 50 °C. Data only for hydrogels containing 3 mol% and 15 mol% SOS-Y triblock copolymer in the network are shown.
