Figure S1. The schematic of DNA absorption on graphene layer (Gra) and the image of graphene layer in z direction. A: The initial simulation setup of DNA on the graphene layer; B: DNA tends to absorb on the image layer; C: DNA finally absorbed on the graphene layer.

Figure S2. The electrostatic interaction between DNA molecule and graphene with different charge density varied from $\sigma = -1 \, e/\text{nm}^2$ to $\sigma = -3 \, e/\text{nm}^2$ is calculated from last 5 ns of simulations.
