**Fig. S1.** Presentation of the portable instrumentation explored to promote the simultaneous decomposition with different light sources powered by a USB port from a personal computer.

**Fig. S2.** Optical image showing the colorimetric analysis of a real serum sample, in which the colored zones indicate the reaction after decomposition with  $\text{Hg}^{2+}$ , UV, Vis and IR lights. The label CZ means control zone.

**Fig. S3** Representation of the percentage of decomposition for GSNO by UV light using test tubes. Percentages calculation were based on Griess and Saviile reactions.  $\lambda=540\text{nm}$
