Supporting information

Multistep Crystal Growth of Oriented Fluorapatite Nanorod Arrays for Fabrication of Enamel-Like Architectures on a Polymer Sheet

Kazuki Nakamura, Yuya Oaki and Hiroaki Imai*

Department of Applied Chemistry, Faculty of Science and Technology, Keio University, Yokohama, Japan

Additional information and data

Figure S1. Photographs of enamel-like FA sheets before (a) and after (b) the removal of the PVA sheet as a substrate in hot water at 90°C. The products were prepared by five-step growth.

Figure S2. SEM images (a−e) and FT-IR spectra (f) of a five-layered film obtained by five-step growth in s-SBF$_{2.0}$ at [F$^-$] = 1.50 mmol/dm$^3$ on the seed layer with D-aspartic acid; cross-sectional view (a, d, e) and plane view (b, c). FT-IR spectra of five-layered films with (i) and without (ii) D-aspartic acid and D-aspartic acid (iii).
