## Table of Contents

- Fig S1. Showing ORTEP of asymmetric unit of complex (**I**) (with 30% probability), where oxygen atoms of water and hydroxonium ions are omitted for the clarity.
- Fig S2. Showing ORTEP of asymmetric unit of complex (**II**) (with 30% probability), where isotropic oxygen atoms of water are omitted for the clarity.
- Fig S3. Showing ORTEP of asymmetric unit of complex (**III**) (with 30% probability).
- Fig S4. Showing ORTEP of asymmetric unit of complex (**IV**) (with 50% probability).
- Fig S5. Showing ORTEP of asymmetric unit of complex (**V**) (with 20% probability).
- Fig S6. Showing ORTEP of asymmetric unit of complex (**VI**) (with 50% probability), where isotropic oxygen atoms of water are omitted for the clarity.
- Fig S7. IR spectra of complexes (**I-VI**).
- Fig S8. Showing generated (red) and experimental (blue) PXRD of complex (**I**)
- Fig S9. Showing generated (red) and experimental (blue) PXRD of complex (**II**)
- Fig S10. Showing generated (red) and experimental (blue) PXRD of complex (**III**)
- Fig S11. Showing generated (red) and experimental (blue) PXRD of complex (**IV**)
- Fig S12. Showing generated (red) and experimental (blue) PXRD of complex (**V**)
- Fig S13. Showing generated (red) and experimental (blue) PXRD of complex (**VI**)
- Fig S14. Front and back views of the Hirshfeld surface for molybdate unit in complex (**I**), mapped with  $d_{norm}$ . Neighboring molecules associated with O···H, O···O close contacts are shown together with the features of respective interactions in the 2D fingerprint plots. Percentage contributions to the Hirshfeld surface area for the close intermolecular contacts b/w molybdate tecton and the surrounding molecules are shown in a pie chart diagram. Isolated red balls indicate water molecules while red balls close to POMo are oxygens of the anion.
- Fig S15. Front and back views of the Hirshfeld surface for molybdate unit in complex (**II**), mapped with  $d_{norm}$ . Neighboring molecules associated with O···H, O···O close contacts are shown together with the features of respective interactions in the 2D

fingerprint plots. Percentage contributions to the Hirshfeld surface area for the close intermolecular contacts b/w molybdate tecton and the surrounding molecules are shown in a pie chart diagram. Isolated red balls indicate water molecules while red balls close to POMo are oxygens of the anion.

Fig S16. Front and back views of the Hirshfeld surface for molybdate unit in complex (**V**), mapped with  $d_{norm}$ . Neighboring molecules associated with O···H, O···O close contacts are shown together with the features of respective interactions in the 2D fingerprint plots. Percentage contributions to the Hirshfeld surface area for the close intermolecular contacts b/w molybdate tecton and the surrounding molecules are shown in a pie chart diagram. Red balls indicate water molecules.

Fig S17. Front and back views of the Hirshfeld surface for molybdate unit in complex (**VI**), mapped with  $d_{norm}$ . Neighboring molecules associated with O···H, O···O close contacts are shown together with the features of respective interactions in the 2D fingerprint plots. Percentage contributions to the Hirshfeld surface area for the close intermolecular contacts b/w molybdate tecton and the surrounding molecules are shown in a pie chart diagram. Red balls indicate water molecules.

#### Compound 1

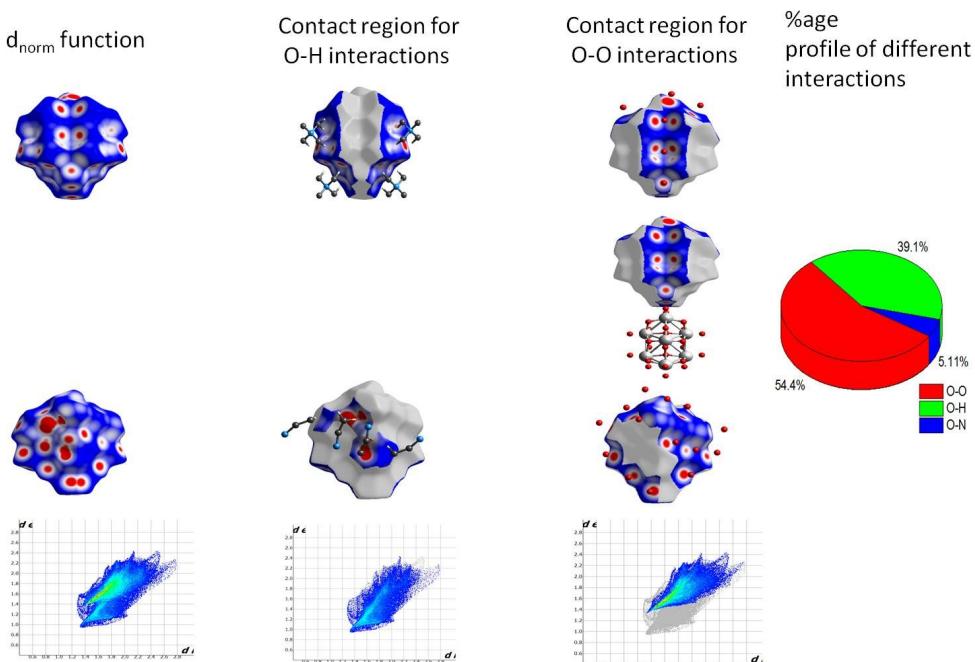

Fig S14. Front and back views of the Hirshfeld surface for POMo unit in complex (I), mapped with  $d_{norm}$ . Neighboring molecules associated with O···H, O···O close contacts are shown together with the features of respective interactions in the 2D fingerprint plots. Percentage contributions to the Hirshfeld surface area for the close intermolecular contacts between POMo tecton and the surrounding molecules are shown in a pie chart diagram. Isolated red balls indicate water molecules

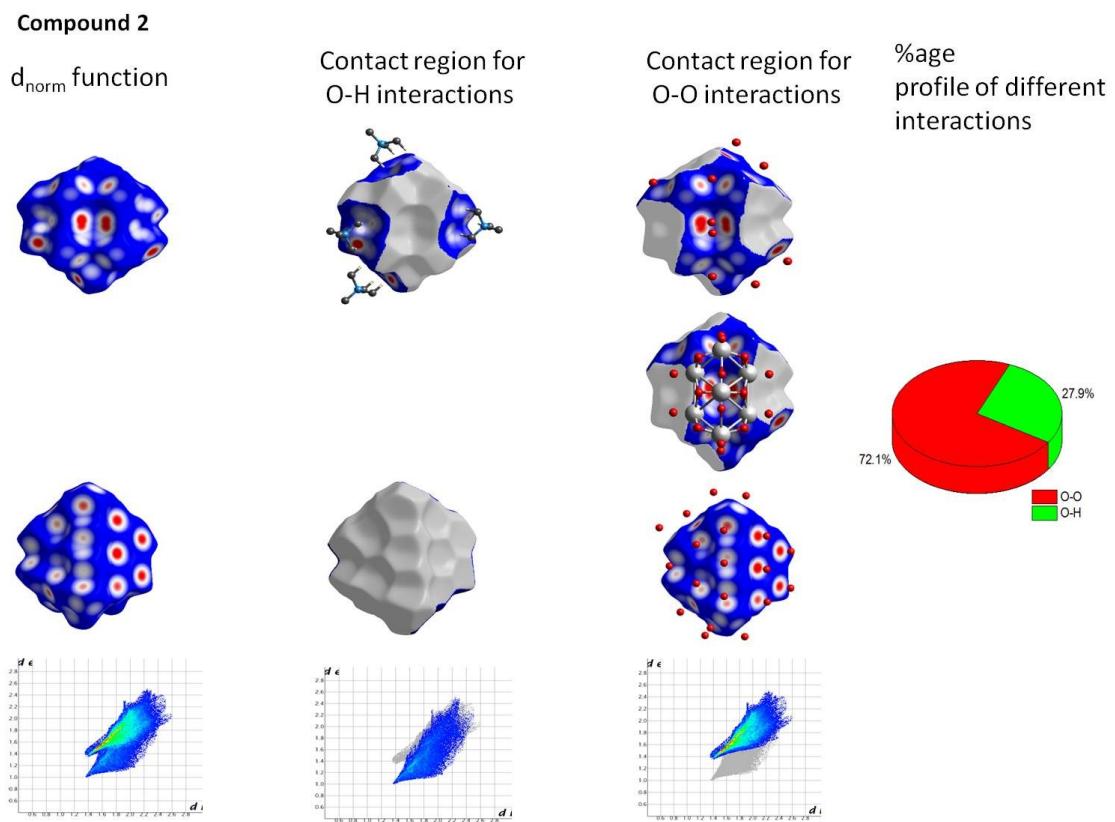

Fig S15. Front and back views of the Hirshfeld surface for POMo unit in complex (**II**), mapped with  $d_{norm}$ . Neighboring molecules associated with O···H, O···O close contacts are shown together with the features of respective interactions in the 2D fingerprint plots. Percentage contributions to the Hirshfeld surface area for the close intermolecular contacts between POMo tecton and the surrounding molecules are shown in a pie chart diagram. Isolated red balls indicate water molecules.

**Compound 5**

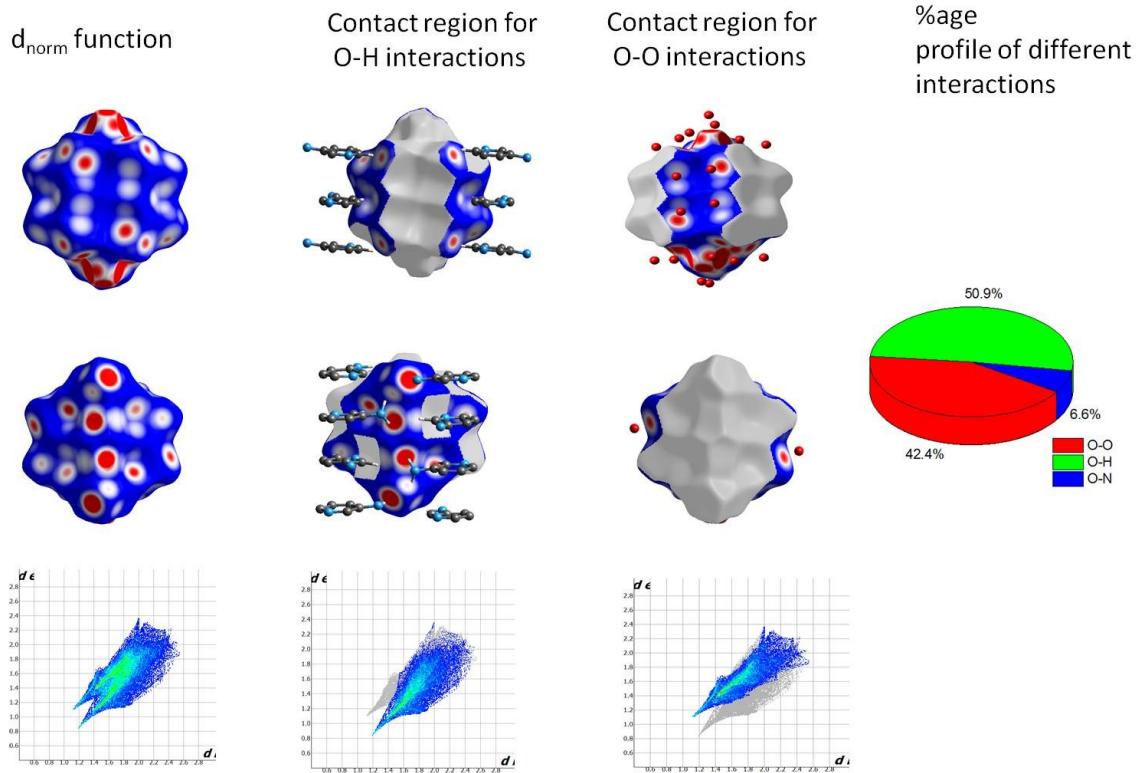

Fig S16. Front and back views of the Hirshfeld surface for molybdate unit in complex (**V**), mapped with  $d_{norm}$ . Neighboring molecules associated with O···H, O···O close contacts are shown together with the features of respective interactions in the 2D fingerprint plots. Percentage contributions to the Hirshfeld surface area for the close intermolecular contacts between POMo tecton and the surrounding molecules are shown in a pie chart diagram. Isolate red balls indicate water molecules.

**Compound 6**

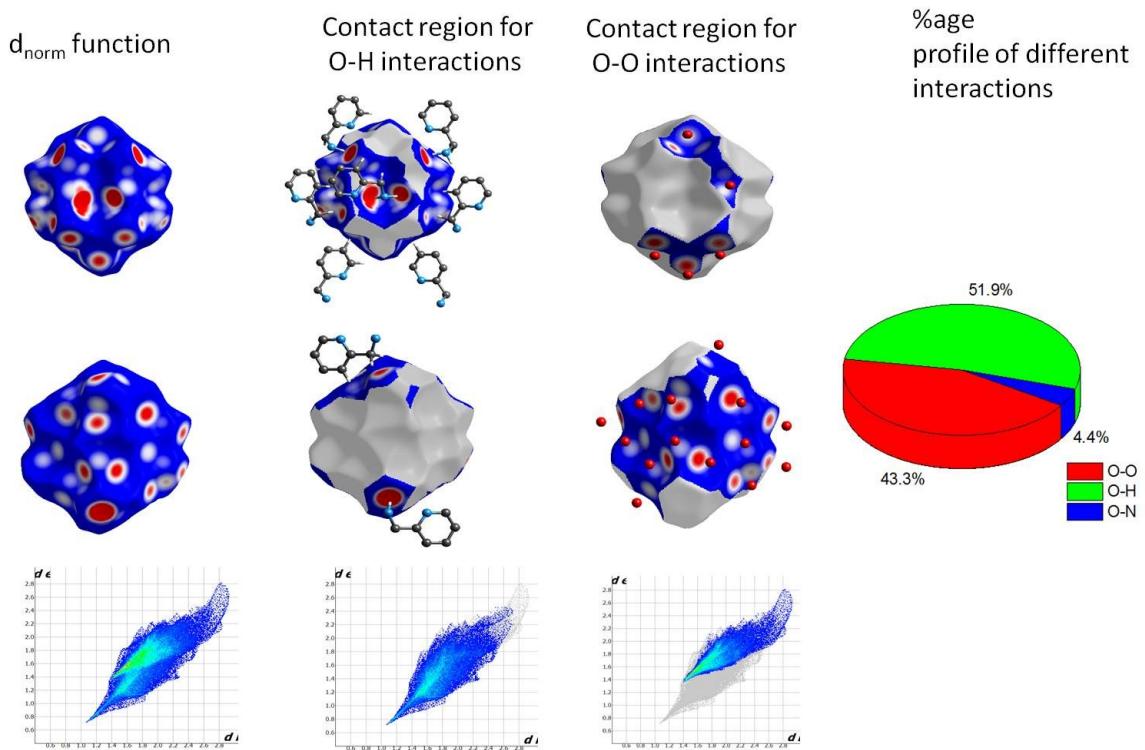

Fig S17. Front and back views of the Hirshfeld surface for POMo unit in complex (**VI**), mapped with  $d_{norm}$ . Neighboring molecules associated with O···H, O···O close contacts are shown together with the features of respective interactions in the 2D fingerprint plots. Percentage contributions to the Hirshfeld surface area for the close intermolecular contacts between POMo tecton and the surrounding molecules are shown in a pie chart diagram. Isolated red balls indicate water molecules.

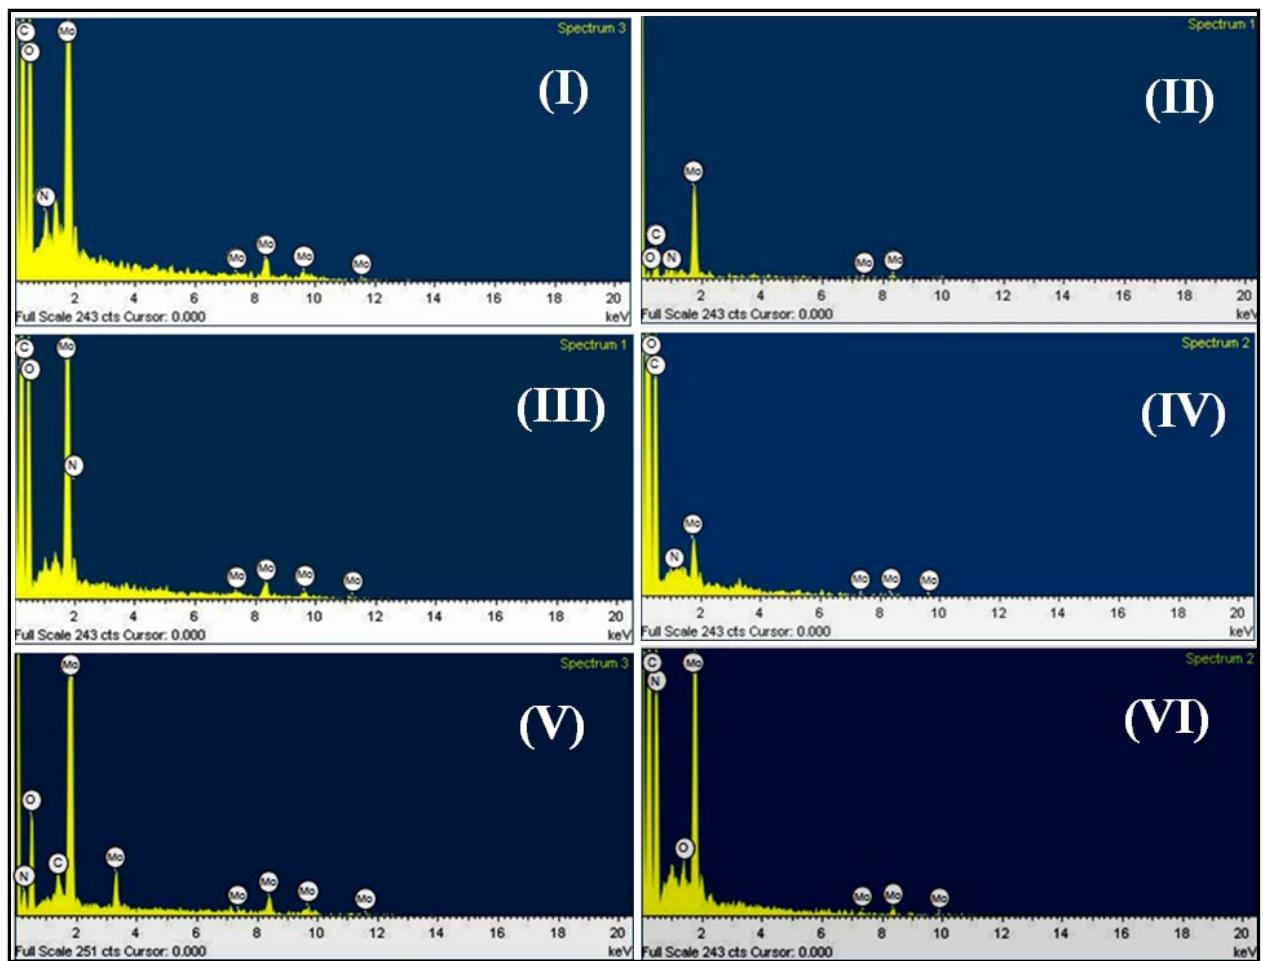

Fig S18. Showing EDS spectra of complexes (I-VI).

Table TS1. Important H-bonding interactions in complexes (**I-VI**)Complex (**I**)

| <b>X-H···Y</b>            | <b>X···Y</b> | <b>X···H</b> | $\angle X\text{-}H\cdots Y$ |
