Electronic Supplementary Information (ESI)
An efficient and inexpensive water-oxidizing manganese-based oxide electrode

Mohammad Mahdi Najafpour*ab and Seyedeh Maedeh Hosseinia

Fig. S32 Cross-section calcined A100 at 500 °C.
Fig. S33 Amperometry (a) and oxygen measurement (b) from calcined A100 at 300 °C at 0.75 V (vs. Ag│AgCl). The arrows shows start for the related experiments. Oxygen evolution from aqueous solutions was investigated using an HQ40d portable dissolved oxygen-meter connected to an oxygen monitor with digital readout.
