Fig. S1 *In vitro* imaging of hADSCs 1 week after GQD labeling. hADSCs were incubated with 2.0 mg/ml GQDs for 1 day and imaged 1 week in the culture. The scale bar indicates 100 μm.
**Fig. S2** *In vitro* live imaging of hADSCs using GQDs with different diameters. Fluorescence microscope images of hADSCs after incubation with ~5 nm and ~10 nm diameter GQDs for 24 hours. The scale bar indicates 100 μm.
Fig. S3 Quantitative fluorescence intensity relative to no treat group (n = 3, *p < 0.05 **p < 0.01 versus no treat group) 12 and 24 hours after treatment of 1.0 mg/ml GQDs into hADSCs.
