Materials and methods

All the chemicals were purchased commercially, and used without further purification, unless otherwise noted. Thin-layer chromatography (TLC) was conducted with 0.25 mm Tsingdao silica gel plates (60F-254) and visualized by exposure to UV light (254 nm) or stained with potassium permanganate. Flash column chromatography was performed using Tsingdao silica gel (60, particle size 0.040–0.063 mm). Reagents were purchased at the highest commercial quality and used without further purification, unless otherwise stated. $^1$H NMR spectra were recorded on Bruker spectrometers (at 300 or 400 MHz) and were reported relative to deuterated solvent signals. Data for $^1$H NMR spectra were reported as follows: chemical shift (δ ppm), multiplicity, coupling constant (Hz) and integration. $^{13}$C NMR spectra were recorded on Bruker Spectrometers (at 75 or 100 MHz). Data for $^{13}$C NMR spectra were reported in terms of chemical shift. Mass spectrometric data were obtained using Bruker Apex IV RTMS. The following abbreviations were used to explain the multiplicities: s = singlet, d = doublet, t = triplet, q = quartet, m = multiplet.

A flame-dried round bottom flask (5 mL) was equipped with magnetic stir bar and charged with alkynes 1 (0.073 mmol, 1.0 equiv), sulfonylhydrazides 2 (0.161 mmol, 2.2 equiv), Ru(bpy)_3Cl_2 (0.0014 mmol, 0.02 equiv), NaOAc (0.161 mmol, 2.2 equiv), KI (0.073 mmol, 1.0 equiv) and DMF/H_2O (v/v = 5:1, 1.0 mL). The mixture was then irradiated by household bulbs (45 W) under a balloon oxygen atmosphere at room temperature until the starting material disappeared from the TLC. After that the reaction mixture was treated with water and extracted with EtOAc, and the combined organic layer was washed with brine and dried over Na_2SO_4. Then the organic layer was concentrated under reduced pressure and the crude product was purified by silica gel column chromatography using hexane/EtOAc (4/1) to afford the desired pure product 3 or 4 in 31-93% yield.
Examinations of other alkynes and sulfonylhydrazides under standard reaction conditions

Other alkynes and sulfonylhydrazides had also been examined. However, we did not obtain the desired products under standard reaction conditions.
