Electronic Supplementary Information (ESI) for

Different cell behaviors induced by stereochemistry on polypeptide brush grafted surfaces

Figure S1. XPS survey spectra and C 1s high-resolution scans of (a) APTES, (b) PBLG, (c) PBDG and (d) PBracG-grafted silicon wafers.
Figure S2. Topography of polypeptide-grafted silicon wafers by AFM: (a) PBLG, (b) PBDG, and (c) PBracG. Top panel: 2D images (5 × 5 μm, Z = 35 nm) and corresponding cross sectional profiles. Bottom panel: 3D images and water contact angle (WCA) measurements.
