**Figure S1.** Cyclic voltammograms of the GCE/CL-08 in the presence of \( o \)-dian at (A) pH 5.56 and (B) pH 9 PBS. Experimental conditions: \( n=50, \nu = 50 \) mV/s and \([o \text{-dian}] = 240 \) mg/L.
Figure S2. Cyclic voltammograms of the GCE/MWCNT for the uptake and electrochemical treatment of o-dian at different concentrations in pH 2 PBS, $\nu = 50$ mV/s vs Ag/AgCl.
