Contents

Figure S1: Absorption (a) and emission (b) spectra of ZnPcS₄ at 298 K with increasing concentration of SDS. ...............................................................2

Figure S2: Absorption spectra of ZnPcS₄ in with increasing concentration of (a) TTAB (i to vi, 0.07 to 12.7 mM) and (b) DTAB (i to v, 0.07 to 26.53 mM) at 298 K. .........................3

Figure S3: Fluorescence decay curve of ZnPcS₄ in with increasing concentration of CTAB (a) and TTAB (b) at 298 K .....................................................................................................4

Figure S4: Plot of anisotropy value of ZnPcS₄ with increasing concentration of CTAB (a) and TTAB (b) emission monitored at respective emission maxima. Inset shows anisotropy value ZnPcS₄ after dissociation of higher aggregates. ..................................................5

Figure S5: Emission spectra of ZnPcS₄ (λₑₓ at 344 nm) with increasing AZDCIQ in deaerated (a) H₂O, (b) CTAB, (b) TTAB and (c) DTAB at 5.6 pH. .............................................6

Figure S6: Plot of log (F₀/F) versus log [AZDCIQ] for the determination of association constant (Kₐ) of ZnPcS₄ and AZDCIQ in H₂O, TATB, CTAB and DTAB at 5.6 pH. (association constant (Kₐ) for H₂O, TATB, CTAB and DTAB are 4.48 x 10⁵ M⁻¹, 2.14 x 10⁷ M⁻¹, 5.56 x 10⁶ M⁻¹ and 2.85 x 10⁵ respectively) .................................................................6

Figure S7: Dynamic Light Scattering profile of different Micelle-ZnPcS₄-AZDCIQ system; [TX-100] = 3.0 mM; [CTAB] = 3.65 mM; [TTAB] = 12.73 mM; [DATB] = 26.53 mM. .........................................................................................................................7
Figure S1: Absorption (a) and emission (b) spectra of ZNPeS$_4$ at 298 K with increasing concentration of SDS.
Figure S2: Absorption spectra of ZnPcS₄ in with increasing concentration of (a) TTAB (i to vi, 0.07 to 12.7 mM) and (b) DTAB (i to v, 0.07 to 26.53 mM) at 298 K.
Figure S3: Fluorescence decay curve of ZnPcS4 in with increasing concentration of CTAB (a) and TTAB (b) at 298 K.
Figure S4: Plot of anisotropy value of ZnPcS₄ with increasing concentration of CTAB (a) and TTAB (b) emission monitored at respective emission maxima. Inset shows anisotropy value ZnPcS₄ after dissociation of higher aggregates.
Figure S5: Emission spectra of ZnPcS$_4$ ($\lambda_{ex}$ at 344 nm) with increasing AZDCIQ in deaerated (a) H$_2$O, (b) CTAB, (b) TTAB and (c) DTAB at 5.6 pH.

Figure S6: Plot of log ($F_0$-F/F) versus log [AZDCIQ] for the determination of association constant ($K_a$) of ZnPcS$_4$ and AZDCIQ in H$_2$O, TATB, CTAB and DTAB at 5.6 pH. (association constant ($K_a$) for H$_2$O, TATB, CTAB and DTAB are 4.48 x 10$^5$ M$^{-1}$, 2.14 x 10$^7$ M$^{-1}$, 5.56 x 10$^6$ M$^{-1}$ and 2.85 x 10$^5$ respectively).
Figure S7: Dynamic Light Scattering profile of different Micelle-ZnPcS₄-AZDCIQ system; [TX-100] = 3.0 mM; [CTAB] = 3.65 mM; [TTAB] = 12.73 mM; [DATB] = 26.53 mM.
