Supporting Information for

A novel PVdF-based composite gel polymer electrolyte doped with ionomer modified graphene oxide

Weili Li\textsuperscript{a,c},*, Zhengbao Zhu\textsuperscript{a}, Wenjun Shen\textsuperscript{a}, Jijun Tang\textsuperscript{a}, Gang Yang\textsuperscript{a,b,*}, Zhexiao Xu\textsuperscript{c},

Contents

Fig. 1S. FTIR spectra of (a) GO-Cl,(b) PAAOB,(c) IMGO

Fig. 2S. DSC curves for the dried composite polymer membranes varied with the content of IMGO

Fig. 3S. Thermograms for pure PVDF membrane and the dried composite polymer membranes varied with content of IMGO

Fig. 4S. Stress–strain curves for the dried CPMs varied with the content of IMGO
Fig. 1S. FTIR spectra of (a) GO-Cl, (b) PAAOB, (c) IMGO
