Video Legends:

**Animation 1:** The construction of $\mu$TEBGs using DBM-MC and BMSCs in integrated dynamic fabrication system for injectable bone tissue engineering applications. 1) Dynamic seeding: add DBM Microcarriers; 2) Dynamic seeding: add seed cells; 3) Dynamic expansion: cell proliferation on microcarriers; 4) Osteogenic differentiation: change into osteoinduce medium; 5) Osteogenic differentiated micro-TEBG; 6) Alginate + micro TEBG: injectable therapy application.
