Figure S1. Synthetic scheme of TMPC.
Figure S2. $^1$H-NMR spectrum of MPC.
**Figure S3.** *In vitro* reactive oxygen species (ROS) generation efficacy using DCF-DA staining in MDA-MB-231 and SK-BR-3 cells incubated with MPC, TMPC upon laser irradiation for 40 sec. The irradiation power of the 671 nm light was 50 mW/cm$^2$. The scale bar is 20 µm.
Figure S4. Flow cytometry quantification of MDA-MB231 (left) and SK-BR-3 (right) cells treated with MPC or TMPC for 1 h.
**Figure S5.** *In vivo* fluorescence images of MDA-MB-231 tumor-bearing mice after a) MPC and b) TMPC intratumoral injection with 50 J/cm² of laser irradiation. Red circle represents tumor area. c) Quantification of Ce6 fluorescence in tumor areas (n=3, mean ± SD).
