Supporting Figures

**Fig.S1** Different N/P ratio of stPEI-CaP/MC.eGFP were used to transfect 293T cells and fluorescence microscope images have been applied to detected transfection efficiency. Scale bar: 200 μm.

**Fig.S2** Transmission electron microscope (TEM) images of stPEI-CaP particles. Scale bar: 5 μm.
Fig. S3 Fluorescent microscope images of anti-IGF1R/CD3 BiTE antibodies directing T cells contact with HepG2 cells. T cells (green, dyed by CFSE), HepG2 (blue, dyed by Hoechst).
