## Table of Contents

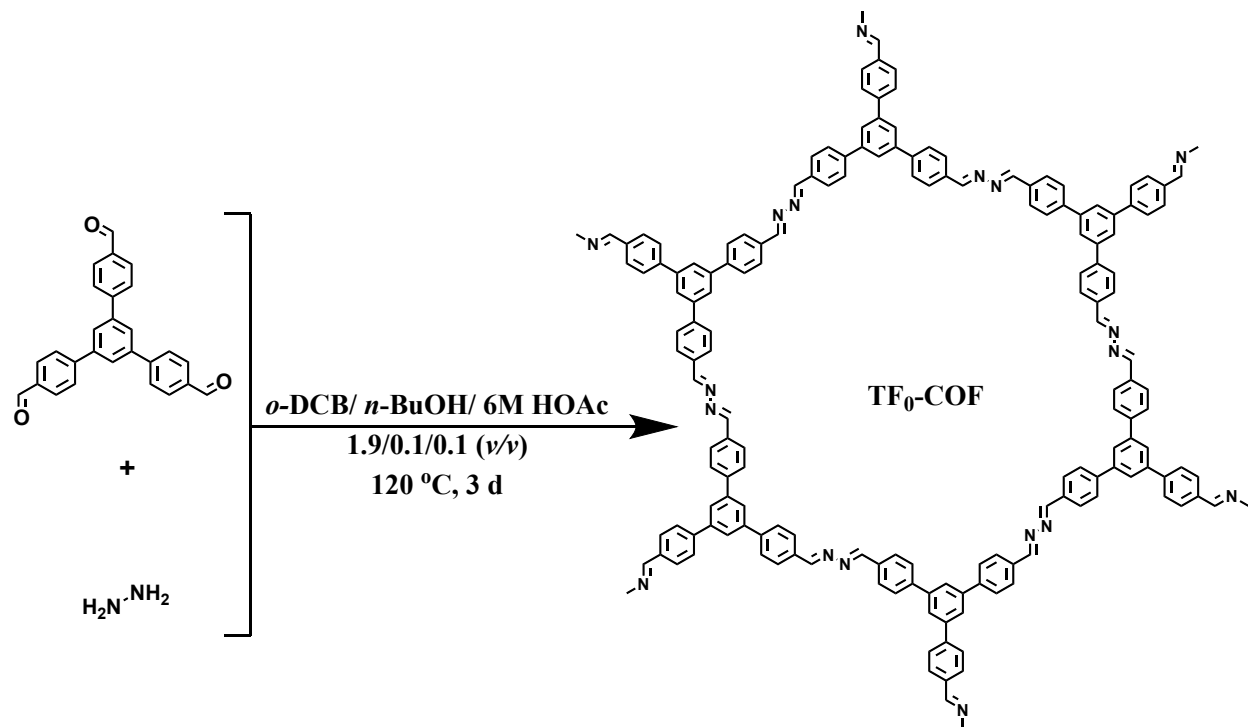

1. General Methods	S3
2. Synthesis, Characterization and Modeling of COFs	S4
3. Atom Coordinates for Dimer Calculations	S8
4. References	S14

## 1. General Methods

Reagents were purchased from commercial suppliers (Sigma-Aldrich and Fisher Scientific) and used as received. Low-pressure gas adsorption experiments (up to 760 torr) were carried out on a Micromeritics ASAP 2020 surface area analyzer. Ultrahigh-purity-grade N<sub>2</sub> gas (obtained from Airgas Corporation) were used in all adsorption measurements. N<sub>2</sub> (77 K) isotherms were measured using a liquid nitrogen bath. Pore size distributions were determined using a density functional theory (DFT) cylindrical pores in an oxide surface model in the Micromeritics Software Package. Powder X-ray diffraction of all COFs were carried out on a Bruker D8 Advance diffractometer with a sealed tube radiation source (Cu K $\alpha$ ,  $\lambda = 1.54184 \text{ \AA}$ ), a low background sample holder, and Lynxeye XE detector. Scanning electron microscope (SEM) images were acquired with Zeiss-LEO model 1530 SEM instrument. <sup>1</sup>H-NMR spectra were carried out on a Bruker 500 MHz Advance Spectrometer. ATR (attenuated total reflectance) FT-IR spectra were taken on a Cary 600 Series FT-IR spectrophotometer.

## 2. Synthesis, Characterization and Modeling of TF<sub>x</sub>-COFs

Here the synthesis of TF<sub>0</sub>-COF is shown in detail. Same procedure was followed for all the other COFs synthesized by varying the TF and NF monomer ratios.

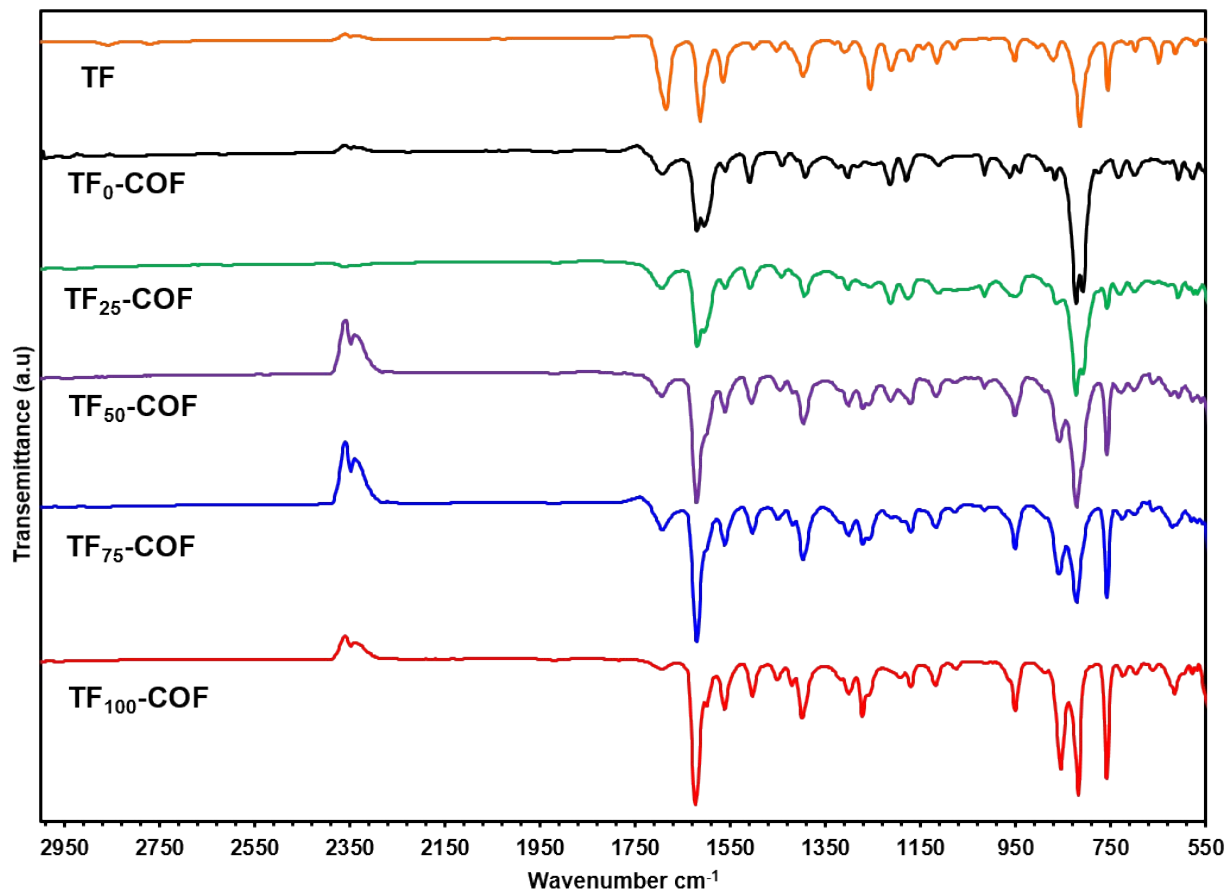

**Scheme S1** Synthesis of TF<sub>0</sub>-COF

1,3,5-*tris*(4-formylphenyl)benzene (30.0 mg, 0.077 mmol) and hydrazine (3.60  $\mu$ L, 0.115 mmol) were sonicated in a 4 mL ampoule with *o*-dichlorobenzene (1.9 mL) and *n*-butanol (0.1 mL) for about 10 mins. Then 6M acetic acid (0.1 mL) was added, the whole mixture was flash frozen in liquid N<sub>2</sub> and flame sealed. The ampoule was kept in an oven at 120 °C for 72 h. After that, it was cooled to rt, and the formed bright yellow solid was filtered. The filtered solid was soaked in neat THF (20 mL) for 2h and then dried under vacuum. Then it was degassed at 120 °C overnight to afford 24.7 mg (73% yield) of TF<sub>0</sub>-COF.

## IR Spectra of TF<sub>x</sub>-COFs

FT-IR spectroscopy of the TF<sub>x</sub>-COF exhibited a stretching vibration band at 1622 cm<sup>-1</sup> which can be assigned to C=N bond based on previous literature<sup>1,2</sup>

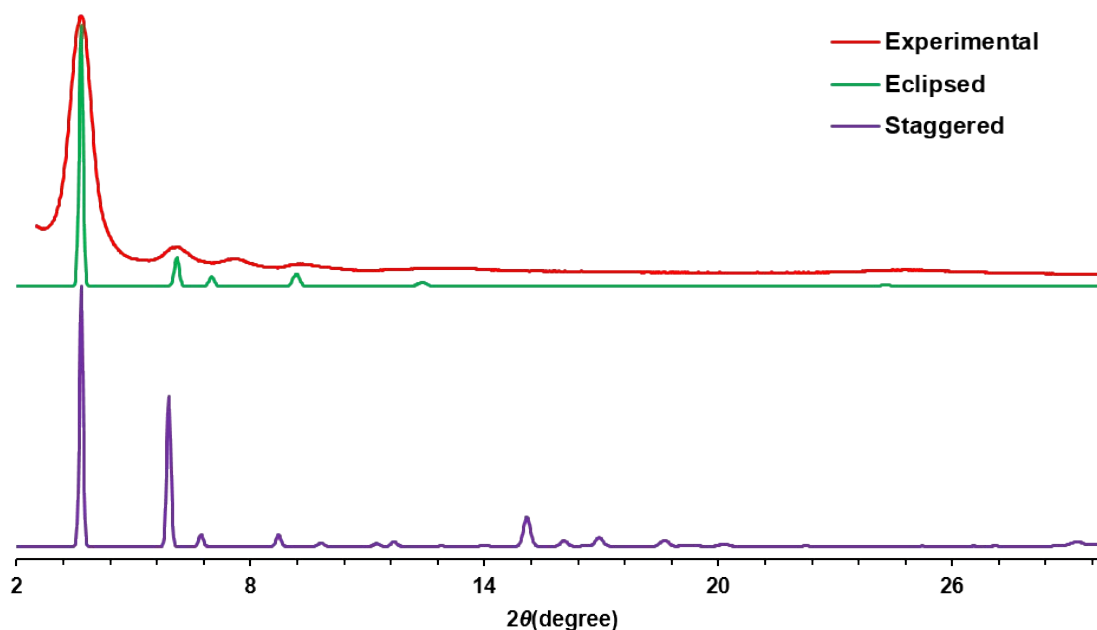

**Fig. S1** FT-IR spectra of TF<sub>0</sub>-COF (black), TF<sub>25</sub>-COF (green), TF<sub>50</sub>-COF (purple), TF<sub>75</sub>-COF (blue) and TF<sub>100</sub>-COF (red) compared with TF aldehyde monomer (orange)

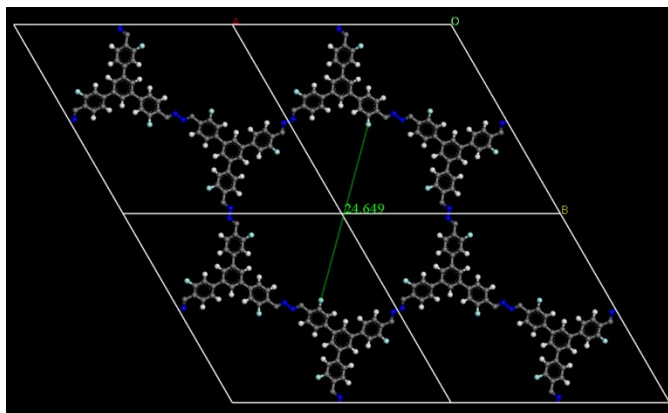

## Computational Modeling of TF<sub>x</sub>-COFs

Computational modeling of the structure of TF<sub>x</sub>-COFs were carried out using the Materials Studio (ver. 7.0) suite of programs. For clarity the modeling of TF<sub>100</sub>-COF is shown here.

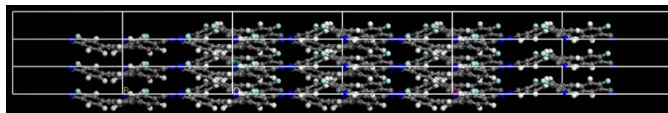

The initial lattice was created by starting with the space group *P3*. The constructed model was geometry optimized using the Forcite module (Smart algorithm). Then the calculated PXRD pattern was generated with the Reflex Plus module using Pseudo-Voigt function. Finally, Pawley refinement was applied for profile fitting, producing the refined PXRD profile with the lattice parameters of  $a = b = 29.522454 \text{ \AA}$  and  $c = 3.637044 \text{ \AA}$ . Rwp and Rp values converged to 5.46% and 3.07%, respectively. The staggered arrangement for TF<sub>100</sub>-COF was also constructed considering *P6<sub>3</sub>/m* as the space group. Comparison of the observed and the simulated PXRD patterns (Fig.S1) evident that the most preferred structure of TF<sub>100</sub>-COF is the eclipsed layer arrangement.

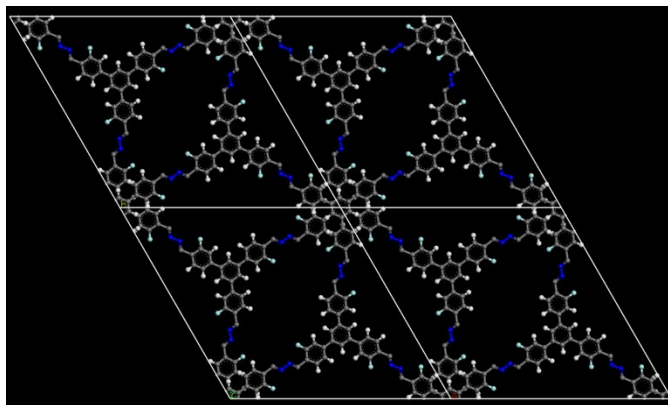

**Fig. S2** Experimental powder X-ray diffraction pattern of TF<sub>100</sub>-COF (red), compared with simulated PXRD patterns of eclipsed layers of COF (green) considering *P3* symmetry and staggered layers of COF (purple) considering *P6<sub>3</sub>/m* symmetry.

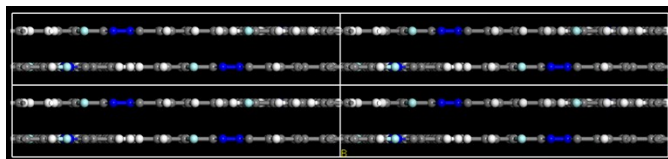

**Fig. S3** View of the simulated structure of the eclipsed TF<sub>100</sub>-COF along *c* axis

**Fig. S4** View of the simulated structure of the eclipsed TF<sub>100</sub>-COF along *a* axis

**Fig. S5** View of the simulated structure of the staggered TF<sub>100</sub>-COF along *c* axis

**Fig. S6** View of the simulated structure of the staggered TF<sub>100</sub>-COF along *a* axis
