Supplementary Information:

Influence of the anatase/rutile ratio on the charge transport properties of TiO$_2$-NTs arrays studied by dual wavelength opto-electrochemical impedance spectroscopy.

T. Cottineau,$^{a,†}$ H. Cachet,$^b$ V. Keller$^a$ and E. M. M. Sutter$^b$

Figure S1: a) Fraction of rutile phase depending on temperature for the in-situ experiment (blue circles) and for the three samples prepared for PEC experiments (black squares). B) Evolution of the anatase and rutile crystallite size as a function of the temperature for the in-situ experiment (red and blue) and for the three samples (wine and violet).
