Figures:

Figure S1: $^1$H-NMR spectrum of [Cu$^I$(PNP)$_2$(ClO$_4$)$_2$, (1), in CD$_3$CN at 300 K. Inset: $^{31}$P-NMR spectrum.

Figure S2: Right.: COSY of (1) in CD$_3$CN. Left.: proton numbering and observed cosy.

Figure S3: Arrhenius plot for the fluxional behavior of (1) in CD$_3$CN. Ea = 47.42 kJ/mol.

Figure S4: Proton numbering of the complex [Cu$^I_2$(PNP)$_2$(phen)](ClO$_4$)$_2$, (2).

Figure S5: $^1$H-NMR spectrum of the complex (2) in C$_2$Cl$_4$D$_2$ at 300K.

Figure S6: COSY spectrum of (2) in C$_2$Cl$_4$D$_2$ at 300K.

Figure S7: $^{31}$P-NMR spectrum of (2) in C$_2$Cl$_4$D$_2$ at 300K.
Figure S8: NOESY spectrum of (2) in C₂Cl₄D₂ at 300K. Green lines indicate Noesy interaction between protons on the pyridine ring and the phen ligand. Other Noesy between phosphine-protons and phen are observed at higher intensity of signals, which agree with the helical conformation in solution, similar to the crystal structure.

Figure S9: ¹H-NMR spectrum of [Cu⁴(PNP)(PPh₃)](ClO₄), (3), in C₂Cl₄D₂ at 300 K. Inset : ³¹P-NMR spectrum.

Figure S10: Right.: COSY of (3). Left.: proton numbering and observed cosy.

Figure S11: ¹H-NMR spectrum of [Cu⁴(PNP)(dmp)](ClO₄), (4), in C₂Cl₄D₂ at 300K. Inset : ³¹P-NMR spectrum.

Figure S12: Left: ³¹P VT-NMR of (4) in CD₃CN at temperature range 224-280K. Right: ³¹P signal (black) and deconvolution of the experimental signal (blue), at 228K.

Figure S13: Deconvoluted emission spectra of complex (4). A fourth Gaussian centered at 630 nm is associated to the radiative relaxation of Cu(I)→dmp MLCT excited state.

Figure S14: Deconvoluted emission spectra of complex (3). The addition of the three individual peaks (black dotted line) perfectly fits with the experimental spectrum (blue dotted line).

Figure S15: Deconvoluted emission spectra of complex (2). Two Gaussians overlap to produce a single Gaussian with higher amplitude centered at 406 nm. A fourth Gaussian centered at 601 nm is associated to the radiative relaxation of Cu(I)→phen MLCT excited state.

Figure S16: Deconvoluted emission spectra of ligand PNP. The addition of the three individual peaks (black dotted line) perfectly fits with the experimental spectrum (blue dotted line).

Tables:

Table S1: Chemical shift and ¹H-NMR assignment for (2).
**Figure S1:** $^1$H-NMR spectrum of [Cu(PNP)$_2$](ClO$_4$)$_2$, (1), in CD$_3$CN at 300K. Inset: $^{31}$P-NMR spectrum.
Figure S2: Right.: COSY of (1) in CD$_3$CN. Left.: proton numbering and observed COSY

Figure S3: Arrhenius plot for the fluxional behavior of (1) in CD$_3$CN. Ea = 47.42 kJ/mol.
Figure S4: Proton numbering of the complex $[\text{Cu}^1_2(\text{PNP})_2(\text{phen})](\text{ClO}_4)_2$, (2).
Table S1: Chemical shift and \(^1\)H-NMR assignment for (2).
