**Fig. S1** Effects of quercetin on the expressions of ABCA1/G1, SREBP-1c, SCD-1 and FASN in HepG2 cells. Cells were treated with 15 μM quercetin for 24 h. Then, qPCR was used to measure ABCA1/G1, SREBP-1c, SCD-1 and FASN mRNA levels. All data were from three independent experiments performed in triplicate and were expressed as means ± SD. *P <0.05 vs control group, n=3.
