Supplemental Figure 1. Sickness Scores. Stacked column plots of mouse sickness scores, data from Monday to Friday shown. Animals became sicker as the experiment progressed as observed for all (A), female (B) and male (C) mice. Higher sickness scores were observed in male mice treated with indium and ruthenium.
Supplemental Figure 2. Animal weight. Average body weight of all (A), female (B) and male (C) mice treated with PBS, bismuth, indium or ruthenium for up to 60 days. For clarity only 2 time points per week are shown.
