**Fig. S1.** XRD patterns of the hydrothermally synthesized SnS$_2$ and its calcination product. The results reveal that the calcination product is still hexagonal SnS$_2$ without any reduction.

**Fig. S2.** Thermogravimetric analysis of the SnS/GNS nanocomposite.
Fig. S3. XRD patterns of the SnS, SnS+GNS and SnS/GNS nanocomposites.

Fig. S4. The BJH desorption pore size distributions of SnS, SnS+GNS and SnS/GNS nanocomposites.
Fig. S5. High-resolution XPS spectra for the C 1s and O 1s of (a,c) SnS+GNS and (b,d) SnS/GNS nanocomposites.
**Fig. S6.** First ten cyclic voltammograms between 0.01 V and 3 V of (a) pure phase stripped SnS and (b) SnS+GNS; Galvanostatic voltage profiles of (c) pure SnS and (d) SnS+GNS; Differential charge-capacity plots at the 1st, 2nd, 5th, 10th and 50th cycle for (e) pure SnS and (f) SnS+GNS.
Fig. S7. Nyquist plots of SnS, SnS+GNS and SnS/GNS fresh electrodes (a) and at the 10th cycle with amplitude 5.0 mV over the frequency range 100 kHz to 0.01 Hz.
