Contents

1. General experimental information (S2)
2. General procedure using the preparation of $N'$-formyl-$N'$-phenylbenzohydrazide (1a) as the example (S2)
3. General procedure using the preparation of $N'$-benzoyl-$N'$-phenylbenzohydrazide (3b) as the example (S2)
4. General procedure using the preparation of 2,5-diphenyl-1,3,4-oxadiazole (6a) as the example (S3)
5. Analytical data for all products (S4-S22)
6. $^1$H NMR and $^{13}$C NMR spectra for all compounds (S23-S74)
7. References for known compounds (S75)
General Experimental Information

All of the chemicals were obtained from commercial sources or prepared according to standard methods. NMR spectra were recorded with a 400 MHz spectrometer for $^1$H NMR, a 101 MHz spectrometer for $^{13}$C NMR. TMS was used as an internal standard. Chemical shifts (δ) were reported relative to TMS ($^1$H) or CDCl$_3$ ($^{13}$C). Multiplicities were reported as follows: singlet (s), doublet (d), triplet (t), quartet (q), multiplet (m), dd (doublet of doublets) and dt (doublet of triplets). Coupling constants were reported in Hertz (Hz). Melting points were recorded with a micro melting point apparatus. High resolution mass spectra (HRMS) were recorded on a QTOF mass analyzer with electrospray ionization (ESI).

General procedure using the preparation of $N'$-formyl-$N'$-phenylbenzohydrazide (1a) as the example

$\text{(E)-1-Benzylidene-2-phenylhydrazine (1.5 mmol, 294 mg), CuBr}_2$ (2.0 equiv, 670 mg) and DMF (10 mL) were added to a 100 mL round-bottom flask. After the mixture was refluxed at 160 °C in air atmosphere for 5 min and TLC indicated the completion of the reaction. The DMF was then distilled off. The residue was dissolved in ethyl acetate (20 mL) and the insoluble residue was filtered. Then the filtrate was washed with water (2 x 5 mL), and dried over Na$_2$SO$_4$. The ethyl acetate was then evaporated and the product was purified by column chromatography on silica gel (petroleum ether/ethyl acetate=5:1) to give 1a (342 mg, 95%).

General procedure using the preparation of $N'$-benzoyl-$N'$-phenylbenzohydrazide (3b) as the example

$\text{(E)-1-Benzylidene-2-phenylhydrazine (1.5 mmol, 294 mg), N,N-dimethylbenzamide (5.0 equiv, 1118 mg), CuBr}_2$ (2.0 equiv, 670 mg) and $\alpha$-xylene (10 mL) were added to a 100 mL round-bottom flask. After the
mixture was reflexed at 160 °C in air atmosphere for 5 min and TLC indicated the completion of the reaction. The \( N,N \)-dimethylbenzamide and \( o \)-xylene was then distilled off. The residue was dissolved in ethyl acetate (20 mL) and the insoluble residue was filtered. Then the filtrate was washed with water (2 x 5 mL), and dried over \( \text{Na}_2\text{SO}_4 \). The ethyl acetate was then evaporated and the product was purified by column chromatography on silica gel (petroleum ether/ethyl acetate=5:1) to give \( 3b \) (346 mg, 73%).

**General procedure using the preparation of 2,5-diphenyl-1,3,4-oxadiazole (6a) as the example**

![Chemical structure of 6a](image)

1-Benzyldiene-2-\textit{tert}-butylhydrazine (1.5 mmol, 264 mg), \( N,N \)-dimethylbenzamide (5.0 equiv, 1118 mg), \( \text{CuBr}_2 \) (1.0 equiv, 335mg) and \( o \)-xylene (10 mL) were added to a 100 mL round-bottom flask. After the mixture was reflexed at 150 °C in air atmosphere for 0.75 h and TLC indicated the completion of the reaction. The \( N,N \)-dimethylbenzamide and \( o \)-xylene was then distilled off. The residue was dissolved in ethyl acetate (20 mL) and the insoluble residue was filtered. Then the filtrate was washed with water (2 x 5 mL), and dried over \( \text{Na}_2\text{SO}_4 \). The ethyl acetate was then evaporated and the product was purified by column chromatography on silica gel (petroleum ether/ethyl acetate=20:1) to give \( 6a \) (283 mg, 85%).
