Fig. S1 Fluorescence spectra of H₂O/DMSO (98:2, v/v) solution of TPE-SDS and TPE-DTAB without (blue line) and with (red line) of *E. coli*.
Fig. S2 Cell viability of HeLa cells incubated with TPE-DTAB/TPE-SDS (5:1, black column). Red column represent untreated cells as control group.

![Bar graph showing cell viability comparison between control and TPE-DTAB/TPE-SDS treated groups.]

Fig. S3 3D representation of TPE-DTAB/TPE-SDS system (5:1) and E. coli mixtures. (A) cyan channel image; (B) red channel image; (C) the overlay image.

![3D images illustrating the 3D representation of TPE-DTAB/TPE-SDS system with E. coli mixtures.]

Fig. S4 Zeta potential values of *E. coli* cells (black columns) in the absence and presence of TPE-DTAB/TPE-SDS systems with ratio of 0:1, 1:9, 1:1.5, 5:1, and 1:0. Red columns represent the zeta potential values of 5 individual TPE-DTAB/TPE-SDS systems.

Fig. S5 SEM images of *E. coli* (A) before incubation and (B) after incubation with TPE-DTAB/TPE-SDS system with ratio of 5:1. Scale bar: 2 μm.
