Experimental Section

Materials: All commercially available chemicals were purchased from Energy, TCI, J&K chemistry or Beijing HWRK Chem Co., Ltd., Soochiral Chemical Reagent Co., Ltd. and used directly without further purification. Tetrahydrofuran (THF) and toluene were distilled from sodium benzophene ketyl under dry nitrogen immediately before use.

Instrumentation: All $^1$H and $^{13}$C NMR spectra were recorded with a Bruker AV 500 spectrometer in deuterated CDCl$_3$ using tetramethylsilane (TMS; $\delta$ = 0) as internal reference. High resolution mass spectra (HRMS) were tested using a GCT premier CAB048 mass spectrometer operated in MALDI-TOF mode. UV-visible absorption spectra were measured with a SHIMADZU UV-2600 spectrophotometer. PL spectra were recorded on a HORIBA Flioromax-4 spectrofluorometer. Fluorescence quantum yields were measured using a Hamamatsu absolute photoluminescence quantum yield spectrometer C11347 Quantaurus-QY. Thermogravimetric analysis (TGA) analysis was carried out on a TA TGA Q5000 absolute at a heating rate of 20 °C/min under dry nitrogen.

Synthesis of compound 1: TPP-Br was prepared according to the literatures.$^{1-3}$ TPP-Br (9.24 g, 20 mmol), Bis(pinacolato)diboron (10.16 g, 40 mmol), 1,1'-Bis(diphenylphosphino)ferrocene palladium(II)dichloride Pd(dppf)Cl$_2$ (730 mg, 1 mmol), and KOAc (7.85 g, 80 mmol) were added into a 500 mL two neck flask under nitrogen. Then 150 mL 1,4-dioxane was injected into the flask and the reaction was stirred and refluxed 10 h. After removing the solvent under vacuum, the mixture was dissolved in DCM and washed with water three times. The organic phase was dried over Mg$_2$SO$_4$ and concentrated. Finally the crude product was purified by a silica-gel column with DCM/hexane (1:10 by volume) as eluent. Oily product was obtained and after creation of vacuum, white solid 1 was obtained in 89.7% yield. $^1$H NMR (500 MHz, CDCl$_3$), $\delta$ (TMS, ppm): 7.76-7.75 (m, 2H), 7.65-7.62 (m, 8H), 7.36-7.29 (m, 9H), 1.35 (s, 12H). $^{13}$C NMR (125 MHz, CDCl$_3$), $\delta$ (TMS, ppm): 148.53, 148.47, 148.39, 148.24, 141.17, 138.43, 138.42, 138.35, 134.56, 129.88, 129.15, 128.61, 128.29, 128.23, 128.22, 83.89, 24.89.

Then 35 mL THF and 15mL H$_2$O were injected and the mixture was refluxed overnight. When the mixture was cooled into the room temperature, a mass of white precipitation can be found in the flask. After filtrating and was washed with ethyl acetate, the crude product was obtained in 78.3% yield. Finally, the crude product was treated with sublimation.
