Experimental Section

General procedures: All reactions were performed under argon atmosphere and solvents were distilled from appropriate drying agents prior to use. Commercially available reagents were used without further purification unless otherwise stated. All reactions were monitored using pre-coated TLC plates (0.20 mm with fluorescent indicator UV254). Mass spectra were obtained on a JEOL SX-102A instrument operating in electron impact (EI) or fast atom bombardment (FAB) mode. $^1$H and $^{13}$C NMR spectra were recorded on a Varian Mercury-400 or an INOVA-500 instrument. Elemental analysis was carried out with a Heraeus CHN-O Rapid Elementary Analyzer.

Synthesis of pentyl perfluorobutyrate:

Perfluorobutyric acid (25 g, 117 mmol) was mixed with 1-pentanol (20.6 g, 234 mmol), followed by dropwise addition of sulfuric acid (5.7 g, 58.4 mmol) at 0 °C. The mixture was stirred at 100 °C for 24 hours. After then, the content was poured over an ice-water mixture. The mixture was stirred 30 minutes at RT, extracted with CH$_2$Cl$_2$ (100 mL x 2), washed with a saturated solution of NaHCO$_3$ (30 mL x 2), water (200 mL x 2) and brine (200 mL x 2). The combined organic layers were dried over Na$_2$SO$_4$, and distilled under vacuum (33 ~ 37 °C, 6.59 mmHg) to yield pentyl perfluorobutyrate (26.5 g, 80 %) as a colorless liquid. $^1$H NMR (400MHz, CDCl$_3$, 298K): δ 4.35 (t, $J = 6.8$ Hz, 2H), 1.74 ~ 1.70 (m, 2H), 1.36 ~ 1.33 (m, 4H), 0.89 (t, $J = 6.8$ Hz, 3H). $^{19}$F NMR (376 MHz, CDCl$_3$, 298K): δ $-81.08$ (t, $J = 8.6$ Hz, 3F), $-119.56$ ~ $-119.65$ (m, 2F),
