Supporting Information

Continuous microfiber drawing by interfacial charge complexation between anionic cellulose nanofibers and cationic chitosan

Rafael Grande, Eliane Trovatti, Antonio J. F. Carvalho*, Alessandro Gandini

The supporting information shows the video of the wet drawing process, in which the fiber is pulled from the interface of chitosan and To-CN1F. The video also shows the fiber is not formed from the pure chitosan solution or To-CN1F suspension.

Figure S1. Conductimetric curve of To-CN1F.

Figure S2. SEM image of To-CN1F.
**Figure S3.** FTIR spectra from droplets on fibers formation

**Figure S4.** TGA curves of neat chitosan, To-CNF and the continuous To-CNF/Chitosan fiber.
