Electronic Supplementary Information (ESI)

Probing Lattice Vibration and Strain States in Highly
Phosphorus-doped Epitaxial Si films

Minhyeong Lee, Eunjung Ko, and Dae-Hong Ko*

Department of Materials Science and Engineering, Yonsei University, Seoul 03722, Korea.

**Figure S1.** (a) A cross-sectional TEM image of the as-deposited epitaxial $\text{Si}_{0.938}\text{P}_{0.062}$ layer grown on Si (001) substrates (b) P depth profile of the as-deposited epitaxial $\text{Si}_{0.938}\text{P}_{0.062}$ layer grown on Si (001) substrates determined by SIMS measurements.
Figure S2. (a) Typical Visible Raman spectra of Si$_{0.938}$P$_{0.062}$ sample as a function of the incident laser power. (b) Normalized Visible Raman spectra of Si$_{0.938}$P$_{0.062}$ sample as a function of the incident laser power.
Figure S3.  (a) Typical UV Raman spectra of Si$_{0.938}$P$_{0.062}$ sample as a function of the incident laser power. (b) Normalized UV Raman spectra of Si$_{0.938}$P$_{0.062}$ sample as a function of the incident laser power.
Figure S4. P depth profile of the as-grown and annealed Si$_{0.938}$P$_{0.062}$ samples determined by SIMS measurements.
