Figure S1. A digital photo of a CNF-AgNW gel fiber in the coagulation bath.
Figure S2. A digital photo of a USB Microscope used to *in-situ* observe the morphology evolution of a CNF-AgNW gel fiber in the solidification process.

Figure S3. A CNF-AgNW fiber was aligned on the glass substrate by silver glue. The T shape ends are used for connecting the four probes of electrical conductivity testing system.

Figure S4. A digital photo of a stretchable conductor constructed by a CNF-AgNW fiber.
Figure S5. A digital photo of a constructed circuit with a stretchable conductor.
