Can 2,2,2-Trifluoroethanol be an efficient protein denaturent than methanol and ethanol under thermal stress?

Dayanidhi Mohanta and Madhurima Jana*

Molecular Simulation Laboratory, Department of Chemistry, National Institute of Technology, Rourkela - 769008, India

**Figure S1:** A representative simulated snapshot of the protein at 50 % TFE solution (right). The initial starting structure is also shown (left)
Figure S2: Time evolution of the RMSDs for all the non-hydrogen atoms of the protein in (a) 10\% (b) 25\% (c) 50\% and (d) 75\% MEH, ETH and TFE solutions at 375 K temperature. The plot for RMSDs of protein in water at this temperature is also shown for comparison.
