Electronic Supplementary Information (ESI) available: [details of any supplementary information available should be included here]. See DOI: 10.1039/x0xx00000x
SI3 The $^{105}$Pd VOCS static NMR spectra of biomineralized Pd (~2-1100 nm), PVP stabilized Pd nanoparticles (16 ± 3 nm), Pd black nanoparticles (20-150 nm) and Pd metal sponge (44-149 μm) acquired at 14.1 T, 11.7 T and 7.05 T. All data were referenced to H$_2$PdCl$_6$(aq) (at δ$_{iso}$ = 0.0 ppm).
