Table of contents

Table of contents ........................................................................................................................................2

Figure S1. UV-vis spectrum of H₂TcPP in EtOH. ..................................................................................3

Figure S2. UV-vis spectrum of 2 in EtOH. ..............................................................................................4

Figure S4. Infrared spectra of 1 and 2 .....................................................................................................8

Figure S5. EDX spectrum of 1. ................................................................................................................9

Figure S6. Cyclic voltammograms of 1 and 2 modified silver/FTO working electrodes in the presence of pH=4.56 buffer solution. Scan rate: 50 mV/s. .............................10

Figure S7. Tafel plots of 1 and 2. .............................................................................................................11

Figure S8. Polarization curves of 1 before (solid line) and after (dotted line) 10 hours’ constant chronoamperometry analysis at –0.4 V vs. RHE. .................................12
Figure S1. UV-vis spectrum of H$_2$TcPP in EtOH.
Figure S2. UV-vis spectrum of 2 in EtOH.
Figure S3. UV-vis spectrum of 1 dissolved in pH=8 phosphate buffer solution.
Figure S4. UV-vis spectrum of 1 dissolved in pH=14 KOH aqueous solution. Precipitation of Co(OH)$_2$ was observed.
Figure S4. $^1$HNMR spectrum of 1 dissolved in pH=8 phosphate buffer deuterium oxide solution. The spectrum shows broad signals besides the solvent peak, resulting from the d$^7$ Co$^{2+}$ center.
Figure S4. Infrared spectra of 1 and 2
Figure S5. EDX spectrum of 1.
Figure S6. Cyclic voltammograms of 1 and 2 modified silver/FTO working electrodes in the presence of pH=4.56 buffer solution. Scan rate: 50 mV/s.
Figure S7. Tafel plots of 1 and 2.
**Figure S8.** Polarization curves of 1 before (solid line) and after (dotted line) 10 hours’ constant chronoamperometry analysis at –0.4 V vs. RHE.
