All manipulations were carried out under an argon atmosphere using either Schlenk line techniques or glove boxes. All solvents were purified by standard methods and/or the Ultimate Solvent System, Glass Contour Company.\textsuperscript{S1} Trace amounts of water and oxygen remaining in the solvents were thoroughly removed by bulb-to-bulb distillation from potassium mirror prior to use. \textsuperscript{1}H, \textsuperscript{13}C, and \textsuperscript{29}Si NMR spectra were measured on a JEOL JNM-ECA600 (\textsuperscript{29}Si: 119 MHz) or on a JEOL AL-300 spectrometer (\textsuperscript{1}H: 300 MHz; \textsuperscript{13}C: 75 MHz; \textsuperscript{29}Si: 59 MHz) in the Joint Usage/Research Center (JURC, Institute for Chemical Research, Kyoto University). A signal arising from residual C\textsubscript{6}D\textsubscript{5}H (7.15 ppm) in C\textsubscript{6}D\textsubscript{6} was used as the internal standard for the \textsuperscript{1}H NMR spectra, while that of C\textsubscript{6}D\textsubscript{6} (128.0 ppm) was used for the \textsuperscript{13}C NMR spectra, and external SiMe\textsubscript{4} (0.0 ppm) for the \textsuperscript{29}Si NMR spectra. High-resolution mass spectra (HRMS) were obtained from a Bruker micrOTOF focus-Kci mass spectrometer (DART).

2. Experimental Details.

Synthesis of 1,2-Tbb\textsubscript{2}-disilylene (1): Potassium graphite (KC\textsubscript{8}, 10.5 mg, 77.7 µmol) was added to a benzene solution (1.5 mL) of 1,2-dibromodisilene 1 (39.1 mg, 35.0 µmol) at room temperature. After stirring the reaction mixture for 30 minutes, the solvent was removed under reduced pressure and \textit{n}-hexane was added. The resulting suspension was filtered to remove graphite and inorganic salts. The filtrate was condensed and recrystallized from \textit{n}-hexane to afford 1,2-Tbb\textsubscript{2}-disilylene 1 (27.8 mg, 29.1 µmol, 83%). 1: yellow crystals, mp 80.0–81.0 °C (dec); \textsuperscript{1}H NMR (300 MHz, C\textsubscript{6}D\textsubscript{6}, 298 K) \( \delta \) 0.28 (s, 72 H, CH(SiMe\textsubscript{3})), 1.27 (s, 18 H, C(Me)), 3.26 (s, 4H, CHSi), 6.93 (s, 4H, ArH); \textsuperscript{13}C NMR (75 MHz, C\textsubscript{6}D\textsubscript{6}, 298 K) \( \delta \) 0.79 (q), 31.23 (q), 34.59 (s), 38.70 (d), 120.41 (d), 137.43 (s), 150.16 (s), 151.35 (s); \textsuperscript{29}Si NMR (59 MHz, C\textsubscript{6}D\textsubscript{6}, 298 K) \( \delta \) 2.74 (SiMe\textsubscript{3}), 16.16 (Si≡Si). UV–vis (\textit{n}-hexane) \( \lambda_{\text{max}} \) (nm, \( \varepsilon \)) = 371 (16,000), 478 (1,900).

Anal. Calcd for C\textsubscript{48}H\textsubscript{98}Si\textsubscript{10}: C, 60.23; H, 10.39. Found: C, 60.30; H, 10.33. MS
(DART-TOF, positive mode): m/z calcd for C_{48}H_{90}Si_{10} 955.5434 ([M+H]^+), found 955.5424 ([M+H]^+).

Synthesis of 1,2-Tbb₂-disilabenene (3): Acetylene gas was generated by treating calcium carbide with degassed water at room temperature under anaerobic conditions and leading the thus produced gas through a column of phosphorus pentoxide. In a J-Young NMR tube (5φ), an n-hexane solution (0.5 mL) of 1 (21.9 mg, 22.9 µmol) was degassed by freeze-pump-thaw cycles. Then, the solution was exposed to acetylene gas that generated as described above (1 atm) and the tube was shaken at room temperature. The color of the solution changed from dark to light yellow after ~10 minutes of shaking. All volatiles were removed under reduced pressure, and the pale-yellow residue was recrystallized from benzene to afford 1,2-Tbb₂-disilabenene 3 (22.5 mg, 22.9 µmol, quant). 3: yellow crystals, mp 130.0-131.0 °C (dec); \(^1^H\) NMR (300 MHz, C\(_6\)D\(_6\), 298 K) δ 0.20 (s, 36H, CH(SiMe\(_3\))\(_2\)), 0.22 (s, 36 H, CH(SiMe\(_3\))\(_2\)), 1.34 (s, 18 H, C(Me\(_3\))\(_3\)), 2.89 (s, 4H, CHSi), 7.02 (s, 4H, Ar(Tbb)H), 7.72 (AA’BB’, J = 3.6, 13.5 Hz, 2H, Si–CH=CH), 7.84 (AA’BB’, J = 3.6, 13.5 Hz, 2H, Si–CH=CH); \(^1^3^C\) NMR (75 MHz, C\(_6\)D\(_6\), 298 K) δ 1.53 (q), 2.12 (q), 31.16 (q), 34.54 (s), 34.58 (d), 122.38 (d), 128.75 (s), 135.30 (d), 145.81(d), 151.65 (s), 151.83 (s); \(^2^9^S^i\) NMR (59 MHz, C\(_6\)D\(_6\), 298 K) δ 2.36 (SiMe\(_3\)), 3.36 (SiMe\(_3\)), 61.67 (Si=Si). UV–vis (n-hexane) \(\lambda_{\text{max}}\) (nm, e) = 363 (8,400), 397 (5,100, sh). MS (DART-TOF, positive mode): m/z calcd for C\(_{32}\)H\(_{103}\)Si\(_{10}\) 1007.5752 ([M+H]^+), found 1007.5691 ([M+H]^+).

Synthesis of 3,5-diphenyl-1,2-Tbb₂-disilabenene (4): An n-hexane solution (0.3 mL) of 1 (11.2 mg, 11.7 µmol) in a J-Young NMR tube was treated with phenylacetylene (4.0 mg, 39.2 µmol, 3.4 equiv) for 10 min. Thereafter, all volatiles were removed under reduced pressure and the pale-yellow residue was recrystallized from n-hexane to afford 3,5-diphenyl-1,2-Tbb₂-disilabenene 4 as stable yellow crystals (13.5 mg, 11.6 µmol, 99%). 4: yellow crystals, mp 137.0-138.0 °C (dec); \(^1^H\) NMR (300 MHz, C\(_6\)D\(_6\), 298 K) δ –0.12 (s, 18H, CH(SiMe\(_3\))\(_2\)), 0.03 (s, 18H, CH(SiMe\(_3\))\(_2\)), 0.06 (s, 18H, CH(SiMe\(_3\))\(_2\)), 0.07 (s, 18H, CH(SiMe\(_3\))\(_2\)), 1.24 (s, 9H, C(Me\(_3\))\(_3\)), 1.28 (s, 9H, C(Me\(_3\))\(_3\)), 2.60 (s, 2H, CHSi), 2.87 (s, 2H, CHSi), 6.85 (s, 2H, Ar(Tbb)H), 6.88 (s, 2H, Ar(Tbb)H), 7.01-7.09 (m, 2H, PhH), 7.16-7.21 (m, 4H, PhH), 7.50-7.53 (m, 4H, PhH), 7.93 (d, 1H, J = 2.0 Hz), 8.06 (d, 1H, J = 2.0 Hz); \(^1^3^C\) NMR (75 MHz, C\(_6\)D\(_6\)): δ 1.37 (q), 1.97 (q), 2.86 (q), 3
2.88 (q), 31.31 (d), 31.35 (d), 32.98 (q), 33.58 (q), 34.60 (s), 34.68 (s), 122.47 (d), 123.06 (d), 126.33 (d), 127.09 (d), 127.77 (d), 128.18 (d), 128.66 (d), 129.36 (d), 130.93 (s), 131.61 (d), 138.47 (s), 144.16 (d), 145.67 (s), 148.63 (s), 149.37 (s), 151.25 (s), 152.10 (s), 152.14 (s), 152.86 (s), 161.05 (s); $^{29}$Si NMR (119 MHz, C$_6$D$_6$, 298 K) $\delta$ 1.26 (SiMe$_3$), 1.88 (SiMe$_3$), 4.39 (SiMe$_3$), 4.48 (SiMe$_3$), 59.72 (Si=Si), 72.66 (Si=Si). UV−vis (n-hexane) $\lambda_{\text{max}}$ (nm, $\varepsilon$) = 385 (11,000), 442 (9,300). MS (DART-TOF, positive mode): $m/z$ calcd for C$_{64}$H$_{110}$Si$_{10}$ 1159.6378 ([M+H]$^+$), found 1159.6341 ([M+H]$^+$).

3. X-Ray Crystallographic Analyses.

Single crystals of 1, [3·C₆H₆], and 4 were obtained from recrystallization in n-hexane (1 and 4) or benzene ([3·C₆H₆]) at –20 °C (1 and 4) or room temperature ([3·C₆H₆]) in an argon-filled glove box. Intensity data for 1 and 4 were collected on a RIGAKU Saturn70 CCD(system) with VariMax Mo Optics using Mo-Kα radiation (λ = 0.71073 Å), while those for [3·C₆H₆] were collected at the BL02B1 beamline of SPring-8 (2016B1716) on a large cylindrical camera using synchrotron radiation (λ = 0.3024(1) Å). The structures were solved using a direct method (SIR2004S³) and refined by a full-matrix least-squares method on $F^2$ for all reflections using the programs of SHELXL-97S⁴ for 1 and 4, and SHELXL-2016/4S⁵ for [3·C₆H₆]. All non-hydrogen atoms were refined anisotropically. The positions of all hydrogen atoms for 1 and 4 were calculated geometrically, while those for [3·C₆H₆] were located on difference Fourier maps, and were refined as riding models. Supplementary crystallographic data were deposited at the Cambridge Crystallographic Data Centre (CCDC) under deposition numbers CCDC-1830586-1830588, and can be obtained free of charge from *via* www.ccdc.cam.ac.uk/data_request.cif.

**Figure S10.** Molecular structure of 1 (ORTEP drawing; thermal ellipsoids set to 50% probability). Hydrogen atoms are omitted for clarity.
**Figure S11.** Molecular structure of 3 (ORTEP drawing; thermal ellipsoids set to 50% probability). Hydrogen atoms and one molecule of benzene are omitted for clarity.

**Figure S12.** Molecular structure of 4 (ORTEP drawing; thermal ellipsoids set to 50% probability). Hydrogen atoms are omitted for clarity.
4. Computational calculations.
All calculations were carried out using the Gaussian 09 (Revision E.01) program package. Geometry optimizations and vibrational frequencies were calculated in the gas phase at the theoretical level indicated in the main text. Computational time was generously provided by the Supercomputer Laboratory of the Institute for Chemical Research at Kyoto University. Optimized geometries are available as the .xyz file.
