Supplementary materials for “Troserutin Subdues Hepatic Tumorigenesis Disrupting MDM2-p53 Interaction”

Nisha Susan Thomas\textsuperscript{a}, Kiran George\textsuperscript{b}, Athavan Alias Anand Selvam\textsuperscript{c}

\textsuperscript{a} Department of Biochemistry and Biotechnology, Annamalai University, Tamil Nadu, India.
\textsuperscript{b} Department of Electronics and Instrumentation Engineering, Bioengineering, Annamalai University, Tamil Nadu, India.
\textsuperscript{c} Department of Organic Chemistry, Indian Institute of Science, Bangalore, India.

Supplementary fig. 1: Quantitative deconvoluted images (analyzed in ImageJ software) of immunohistochemical expressions of GST-P foci and PCNA positive cells showing the intensity of DAB in the liver sections of control and experimental rats.
Supplementary fig. 2: Quantitative deconvoluted images (analyzed in ImageJ software) of immunohistochemical expressions of PARP-1 showing the intensity of DAB in the liver sections of control and experimental rats.
Supplementary fig. 3: Quantitative deconvoluted images (analyzed in ImageJ software) of immunohistochemical expressions of MDM2, p53, Bcl-2 and Bax showing the intensity of DAB in the liver sections of control and experimental rats.
**Supplementary fig. 4:** Quantitative deconvoluted images (analyzed in ImageJ software) of immunohistochemical expressions of cytochrome C, caspase-9 and caspase-3 showing the intensity of DAB in the liver sections of control and experimental rats.
