Chemistry

General: All the chemicals used were of laboratory grade. Melting points of all the synthesized compounds were determined in open capillary tubes and are uncorrected. ¹H NMR and ¹³C NMR spectra were recorded with a Bruker Avance 400 spectrometer operating at 400 and 100 MHz using DMSO-*d*₆ solvent and tetramethylsilane (TMS) as the internal standard and chemical shift in δ ppm. Mass spectra were recorded on a Sciex, Model; API 3000 LCMS/MS Instrument. The progress of reaction was checked by TLC using silica-gel, 60F₂₅₄ aluminum sheets as adsorbent and visualization was accomplished by iodine/ultraviolet light. All compounds were known and IR, ¹H, ¹³C NMR spectra were found to be identical to the ones described in literature.¹⁷

General procedure for the synthesis of dihydropyrido[2,3-*d*:6,5-*d'*]dipyrimidinetetraone (**3a-k**)

A mixture of substituted aldehydes (**1a-k**) (1 mmole), barbituric acid (**2a**) (2 mmole) and ammonium acetate (2 mmole) were added in DIPEAc (5 ml). The resulting mixture was stirred at room temperature. The progress of the reaction was monitored by thin layer chromatography. After 45 min of stirring the reaction mixture was poured on crushed ice. Solid obtained was filtered and washed with water. Dried solid crystallised from ethanol to afford the purified desired product. Synthesized compounds characterized by IR, ¹H, ¹³C NMR spectra and were found to be identical to the ones described in literature.¹⁷
