$^1$H NMR, $^{13}$C NMR, optical rotation, and mass spectral data for Xenortides A-D and their $\textit{ent/epi}$-stereoisomers…..S2-S50
All reagents and solvents were purchased from commercial sources and used without further purification. Compounds were purified using flash chromatography with Whatman Purasil 60 Å 230-400 mesh silica gel or by preparative TLC using Dynamic Absorbents Inc. silica gel TLC 250 µm w/h F-254, catalog no. 84111. Proton and carbon NMR spectra were recorded using a Bruker Avance III 600 spectrometer. The residual solvent signal in CD₃OD was referenced to 3.31 and 49.0 ppm in proton and carbon spectra respectively. Mass spectral data were taken on a Waters ESI-MS, model LCT premier XE. Methyl isocyanide was prepared as described in: R. E. Schuster, J. E. Scott, J. Casanova, *Organic Syntheses* 1966, **46**, 75. (DOI: 10.15227/orgsyn.046.0075).
