Synthesis and Characterization

2-(1-imidazolylcarbonylamino)-6-methyl-4[1H]-pyrimidinone (2)
This compound was prepared as reported by Sze et al.\textsuperscript{1} A mixture of 6-methylisocytosine (5.0 g, 0.04 mol) and 1,1' carbonyldiimidazole (8.43 g, 0.052 mol) in dry THF (100 mL) was refluxed for 12 h. The suspension was cooled to 25 °C and filtered. The solid was washed with acetone (20 mL) three times and dried in vacuum oven to afford a white solid (8.62 g, 98%). Compound 2 was used in the subsequent step without further purification. \textsuperscript{1}H NMR (300 MHz, CD\textsubscript{3}OD): $\delta$ 7.69 (s, 1H), 7.05 (s, 2H), 5.94 (s, 1H), 2.22 (s, 3H).

1-(2-Hydroxyethyl)-3-(6-methyl-4-oxo-1,4-dihydropyrimidin-2-yl)urea (3)
This compound was prepared as reported by Meijer et al. with slight modification.\textsuperscript{2} A mixture of imidazolide 2 (5.0 g, 22.8 mmol) and ethanolamine (2.9 mL, 48.3 mmol) was stirred in dry THF (100 mL) under a nitrogen atmosphere. Dry triethylamine (3 mL) was added to the suspension, and then the mixture was stirred at 50 °C for 24 h. The solution was allowed to cool to room temperature and 100 mL acetone was added. The white precipitate was filtered and rinsed with water and then acetone. After dried under vacuum, the product 3 was obtained as a white solid (3.48 g, 72%). \textsuperscript{1}H NMR (300 MHz, DMSO-$d_6$): $\delta$ 11.55 (s, 1H), 9.80 (s, 1H), 7.50 (s, 1H), 5.77 (s, 1H), 4.81 (s, 1H), 3.45 (m, 2H), 3.21(m, 2H), 2.10 (s, 3H).
