APPENDIX 1
ITEM WRITING FLAWS
EVALUATION INSTRUMENT
(IWFEI)
USEAGE GUIDE

Jared Breakall, Dr. Chris Randles, and Dr. Roy Tasker
# Table of Contents

Introduction to Multiple-Choice Item Format ................................................................. Page 2
Is the Test Item Clear and Succinct? ............................................................................. Page 3
If the item uses negative phrasing such as “not” or “except”, is the negative phrase bolded? ................................................................. Page 4
If the answer choices are numerical: Are they listed in ascending or descending order? ................................................................. Page 5
If the answer choices are verbal: Are the answer choices all approximately the same length? ................................................................. Page 6
Does the item avoid “all of the above” as a possible answer choice? ..................... Page 7
Does the item avoid grammatical and phrasing cues? .............................................. Page 8
Could the item be answered without looking at the answer choices? .................... Page 9
Does the item avoid complex K-type item format? .................................................... Page 10
Is this item linked to one or more objectives of the course? ..................................... Page 11
Are all answer choices plausible? ............................................................................. Page 12
Are there six or less thinking steps needed to solve this problem? ......................... Page 13
Does the exam avoid placing three or more items that assess the same concept next to each other? ................................................................. Page 14
Does the exam avoid placing three or more difficult items next to each other? .......... Page 14
Is there an even distribution of correct answer choices? ......................................... Page 14
Does the exam avoid linking performance on one item with performance on others? ................................................................. Page 15
References .............................................................................................................. Page 16
9. How many moles of $K^+$ ions are in 30 mL of 0.60 M $K_3PO_4$?

(a) 0.054
(b) 0.042
(c) 0.036
(d) 0.018
(e) 0.006
Is the test item clear and succinct?

- The stem can only be interpreted as having one meaning.
- The stem doesn’t include any extra information or wording (Needed context is appropriate).
- The answer choices don’t include any extra information or wording
- There is clearly only one correct answer choice

**Good Example**

1. The atomic weight of silicon is 28.0855. Round this number to 4 significant figures.
   - (a) 28.0
   - (b) 28.08
   - (c) 28.09
   - (d) 28.086
   - (e) 28.1

**Poor Example**

6. It takes 19 days for a particular nuclide to decay 30% of its original activity. What is the half-life of this nuclide?
   - (a) It would take 0.44 days
   - (b) It would take 11 days
   - (c) It would take 16 days
   - (d) It would take 27 days
   - (e) It would take 37 days

**Poor Example**

3. Aspirin is a pain killer that has a density of 1.40 g/cm³. What is the amount (in moles) of aspirin, C₉H₈O₄, in a 325 mg tablet that is 100% aspirin?
   - (a) 0.00180 mol
   - (b) 0.00325 mol
   - (c) 0.467 mol
   - (d) 1.80 mol
   - (e) 2.80 mol
If the item uses negative phrasing such as “not” or “except”, is the negative phrase bolded or capitalized?

- The words “not” or “except” should be bolded or capitalized if included in the item.
- Avoiding “not” or “except” is ideal in most cases.

**Good Example**

_____ 1. Which of the following contains a triple bond?
   
   a. ethylene  
   b. ethane  
   c. propene  
   d. benzene  
   e. propyne

**Good Example**

_____ 1. Which of the following does NOT contain a triple bond?
   
   a. Butyne  
   b. Pentyne  
   c. Hexyne  
   d. Benzene  
   e. Propyne

**Poor Example**

_____ 1. All of the following processes are exothermic except:
   
   a. Combustion of propane  
   b. Rusting of iron  
   c. Freezing of water  
   d. Melting of ice

- The stem of this question doesn’t contain negative phrasing. This is ideal for most items.
- The negative phrase is capitalized.
- The word ‘except’ is not bolded or capitalized.
If the answer choices are numerical:

Are they listed in ascending or descending order?

- Numerical answer choices should be listed in ascending or descending order. For example: 1,2,3 vs. 2,1,3

**Good Example**

12. What is the molality of a solution prepared by mixing 12.0 g benzene (C6H6) with 38.0 g CCl4?

   a. 0.240 \( m \)
   b. 0.316 \( m \)
   c. 0.508 \( m \)
   d. 0.622 \( m \)
   e. 4.05 \( m \)

The answer choices are written in ascending numerical order.

**Poor Example**

12. What is the molality of a solution prepared by mixing 12.0 g benzene (C6H6) with 38.0 g CCl4?

   a. 4.05 \( m \)
   b. 0.240 \( m \)
   c. 0.622 \( m \)
   d. 0.316 \( m \)
   e. 0.508 \( m \)

The answer choices are not written in ascending or descending numerical order.

This is *Not Applicable* if an item is K-type

Symbolic answer choices, such as electron configurations or chemical formulas are NOT considered numerical.

This criterion would be Not Applicable.
If the answer choices are verbal:

Are the answer choices all approximately the same length?

- An answer choice should not be substantially longer or shorter than any of the other choices. This may cue students to an answer without consideration of the item content.

**Good Example**

_____  19. What is the purpose of standardizing a solution?

   a. To determine its purity.
   b. To determine its concentration.
   c. To measure its volume.
   d. To determine its molecular formula.
   e. To determine the endpoint.

**Poor Example**

_____  19. What is the purpose of standardizing a solution?

   a. To determine its purity.
   b. The purpose is to determine the concentration of the solution
   c. To measure its volume.
   d. To determine its molecular formula.
   e. To determine the endpoint.

This item keeps all answer choices approximately the same length.

One answer choice is significantly longer than the others.

(this item includes phrasing cues as well (see page 8))
Does the item avoid “all of the above” as a possible answer choice?

- Using “all of the above” as an answer choice can cue students to eliminate distractors.

**Good Example**

_____ 1. Which of the following contains a triple bond?

   a. ethylene  
   b. ethane  
   c. propene  
   d. benzene  
   e. propyne

**Poor Example**

_____ 1. Which of the following contains a triple bond?

   a. ethylene  
   b. ethane  
   c. propene  
   d. propyne  
   e. all of the above

For K-type items, if an answer choice includes all of the possibilities, then it violates this guideline.
Does the item avoid grammatical and phrasing cues?

- A cue leads a student to the right answer or to eliminating a distractor.
- A grammatical cue is a difference in grammar between the stem and the answer choices or between answer choices.
- A phrasing cue is where a phrase from the stem is used in one distractor or in the correct answer.

**Good Example (Grammatical cuing)**

_ 19. Carbon has ____ proton(s).

(a) One
(b) Three
(c) Six
(d) Twelve

This item keeps the grammar of the stem consistent with the answer choices.

**Poor Example (Grammatical cuing)**

_ 19. Carbon has ____ protons?

(a) One
(b) Three
(c) Six
(d) Twelve

Answer choice A does not fit the grammatical structure of the stem. This may cue students to it being the incorrect answer.

**Good Example (Phrasing cues)**

_ 19. How many proton(s) does Carbon have?

(a) One
(b) Three
(c) Six
(d) Twelve

This item gives no phrasing cues to the correct answer.

**Poor Example (Phrasing cues)**

_ 19. How many proton(s) does Carbon have?

(a) One
(b) Three
(c) Six protons
(d) Twelve

This item using a phrase (protons) from the stem in the correct answer choice. This may cue students to choose this answer.
Could the question be answered without looking at the answer choices?

- It is important to write the stem of an item in a way that it could be answered without looking at the answer choices. This ensures that the central idea is included in the stem.

**Good Example**

19. Hydrogen can have how many protons?
   (a) 0 or 1
   (b) 1
   (c) 1 or 2
   (d) 2

This item contains the central idea in the stem and can be answered without the answer choices.

**Poor Example**

19. Hydrogen:
   (a) can have 0 or 1 protons
   (b) can only have 1 proton
   (c) can have 1 or 2 protons
   (d) can only have 2 protons

This item cannot be answered without looking at the answer choices. The stem doesn’t contain the central idea.
Does the item avoid complex K-type item format?

- K-Type items have answer choices that contain combinations of other answer choices.
- K-Type items have been shown to cue students to the correct answer
- Ordering items, such as the ordering of ion-size, are not considered to be K-type.

**Good Example**

12. What is the molality of a solution prepared by mixing 12.0 g benzene (C₆H₆) with 38.0 g CCl₄?

a. 4.05 m  
b. 0.240 m  
c. 0.622 m  
d. 0.316 m  
e. 0.508 m

This item avoids K-type format

**Poor Example**

5. Which of the following properties influence the frequency of a molecular vibration, seen in infrared absorption spectra?

i. Size (radius) of the atoms on each side of the bond  
ii. Strength of the bond between atoms  
iii. Mass of the atoms on each side of the bond

a. i only  
b. ii only  
c. iii only  
d. i and ii  
e. ii and iii

This is an example of a K-type question

**Good Example**

17. A double bond is composed of _______ bond(s) and _______ rotate.

a. Two sigma; cannot  
b. Two pi; cannot  
c. One sigma and one pi; cannot  
d. One sigma and one pi; can  
e. Two sigma; can

This is a fill-in-the-blank item. This is NOT in k-type format.
Is this item linked to one or more objectives of the course?

- Test items should test one or more objectives of the course.

**Hypothetical Course Objectives**

Students Should Be Able to:

1. Interconvert between skeleton structures and chemical formulas.
2. Determine the number of atoms in a molecule based on various representations.
3. Draw Lewis Dot Diagrams from molecular formulas.

**Good Example:**

3. What is the correct formula for the organic molecule shown below?

   \[ \text{OH} \quad \bigg(\text{molecule structure} \bigg) \]

   - a. \( \text{C}_7\text{H}_{14}\text{O} \)
   - b. \( \text{C}_8\text{H}_{14}\text{O} \)
   - c. \( \text{C}_7\text{H}_{13}\text{O} \)
   - d. \( \text{C}_6\text{H}_{13}\text{O} \)
   - e. \( \text{C}_4\text{H}_{10}\text{O} \)

   This item directly assesses course objective 1 and indirectly assesses objective 2.

**Poor Example:**

2. Alkenes by definition contain a ________.

   - a. \( \text{C}=\text{C} \) bond
   - b. \( \text{C}≡\text{C} \) bond
   - c. \( \text{C}–\text{C} \) bond
   - d. \( \text{C}=\text{H} \) bond
   - e. \( \text{C}≡\text{H} \) bond

   This item doesn’t assess any of listed the course objectives.
Are all answer choices plausible?

- **All** distractors should be made by using common student errors or misconceptions. Even if only one distractor is not, then the item is in violation of this guideline.

- Each distractor should have been chosen by more than 5% of the students tested.

---

**Good Example**

_____ 6. What kind of electromagnetic radiation is able to break bonds?

- **a. Ultraviolet**
- b. Infrared
- c. Visible
- d. Microwave
- e. Radiowaves

---

**Poor Example**

_____ 6. What kind of electromagnetic radiation is able to break bonds?

- **a. Ultraviolet**
- b. Infrared
- c. Visible
- d. Microwave
- e. The bonds of friendship are too strong to break.
Are there six or less thinking steps needed to solve this problem?

- A thinking step is a small cognitive process that must be taken to solve a problem (Johnstone & El-Banna, 1986).
- The thinking steps should be based on the average student taking the exam.

The following is an example of the thinking steps that may exist in an item. Reproduced from (Johnstone & El-Banna, 1989) with permission from the Royal Society of Chemistry.

| 'What volume of molar hydrochloric acid would be exactly neutralized by ten grams of chalk?' |
| Thinking Steps: |
| 1. chalk---calcium carbonate (recall) |
| 2. calcium carbonate =-CaCO₃ (recall or deduce) |
| 3. Formula weight of CaCO₃= 100 g (calculate) |
| 4. When it reacts with hydrochloric acid, what are the products? (recall) |
| 5. Write a balanced equation (transformation) |
| 6. Recognize that 1 mole CaCO₃~ 2 moles HCl (deduce) |
| 7. = 2 litres of molar HCl (recall) |
| 8. 10 g CaCO₃ ~ 1/10 mole ~ 1/5 mole HCl (deduce) |
| 9. ~ 1/5 litre molar HCl (recall) = 200 ml molar HCl |

Because this item can be viewed as having nine thinking steps, it may be measuring working memory capacity along with the students understanding of chemistry. This negatively effects the validity of the item.
Does the exam avoid placing three or more items that assess the same concept or skill next to each other?

- Placing three or more similar questions next to each other may cue students to what the correct answer may be.
- A concept or skill is defined as the same learning objective.

Does the exam avoid placing three or more difficult items next to each other?

- A difficult item is defined as an item that you believe less than 50% of students will get correct.

Is there an approximately even distribution of correct answer choices?

- Correct answer choices should be approximately evenly distributed. No two distractors should have a difference of greater than two in frequency appearing in the key.

\[
\text{Even Distribution} = \frac{i_t}{a} \pm 1 \text{ (for each answer choice)}
\]

\[i_t = \text{Total number of items in the exam}\]
\[a = \text{Answer choices per item}\]

**Good Example**

Answer Key 4 choices per item
1) A  
2) C  
3) C  
4) D

**Poor Example**

Answer Key 4 choices per item
1) A  
2) C  
3) C  
4) C
Does the exam avoid linking performance on one item with performance on others?

- Items should be independent of one another on an exam.

**Good Example**

1. What is the molar mass of C₆H₁₂O₆?
   a) 168.2
   b) 180.2
   c) 200.2

2. How many moles of water are there in a 14.0 gram sample of H₂O?
   a) 1.00
   b) 0.780
   c) 0.550

**Poor Example**

1. What is the molar mass of C₆H₁₂O₆?
   a) 168.2
   b) 180.2
   c) 200.2

2. Based your answer to question one, would a 0.5 mole sample of C₆H₁₂O₆ weigh more or less than 90.0 grams?
   a) More
   b) Less
   c) Not enough information to tell
