Fig. S1. An enlarged view of the XRD pattern of 2.0 wt% Ag-modified NS-C$_3$N$_4$ treated at 623 K with H$_2$. The # mark is assigned to (111) diffraction peak of Ag$^0$.

Fig. S2. (A) XRD patterns and (B) diffuse reflectance spectra of 2.0 wt% Ag-modified NS-C$_3$N$_4$ prepared at different conditions. The # mark in the panel (A) is assigned to (111) diffraction peak of Ag$^0$. A broad peak at around 22 degree in XRD patterns originated from a glass folder for the measurement.
